

Your MASTER BLASTER can be mounted to a wall with the wall mount bracket supplied in this kit. Mollies should be used to secure mounting bracket when attaching to sheet rock. Ideally, one of the screws should go into a wall stud. Level wall mount bracket in desired position and mark screw locations with pencil within screw holes. Once bracket is securely mounted, the MASTER BLASTER can be hung by the wheel axle located on the INTAKE side of the MASTER BLASTER.

Wall Mount Bracket

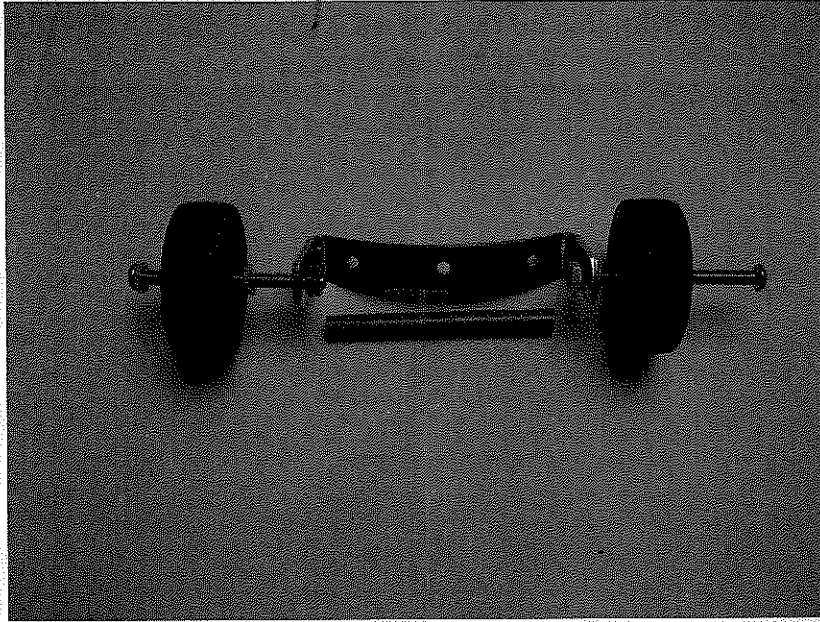

**INTAKE side of the MASTER BLASTER and wheel bracket.
Remove original screws, wheels and nuts**

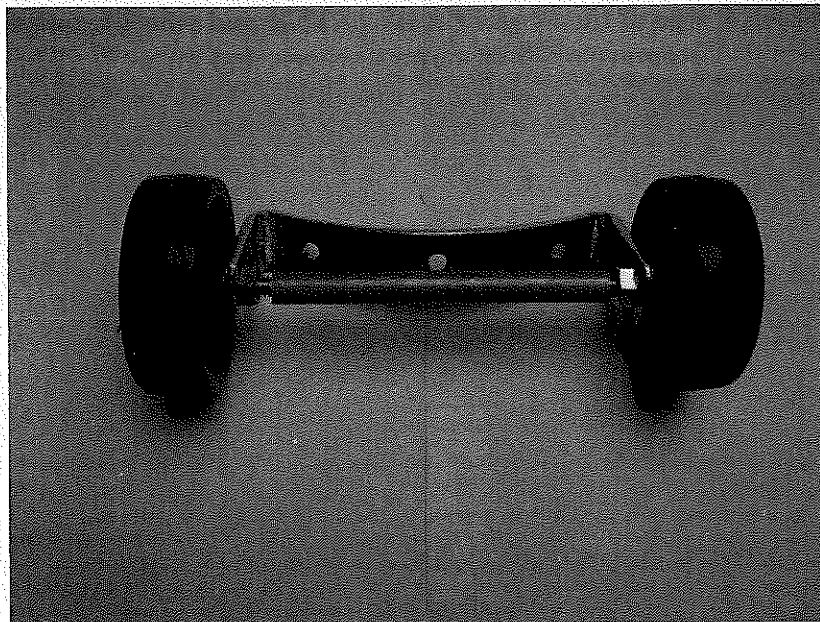

PLEASE NOTE: DO NOT REMOVE THE WHEEL BRACKET FROM THE MASTER BLASTER, JUST THE SCREWS, NUTS AND WHEELS

Place plastic washer, wheel and plastic washer onto 3" screw and begin to thread onto wheel bracket and put nut into place. Duplicate the process for the opposite side. Place aluminum spacer between the screws, hold the hex nuts and tighten. Please make sure that you leave room for the wheels to turn freely.

When complete your wheel bracket should like this.
