

LDC18 DROP-IN COOLER

The Lynx 18 inch Drop In Cooler is fully insulated and fabricated from welded stainless steel with polished highlights

The cooler features:

1.7 cubic feet of insulated storage

13 inch depth accommodates most wine bottles

Heavy duty insulated gasket and lid to keep items cold

Hydraulic lid bracket that holds lid open and provides soft close action

Removable hinge pins and lid bracket to allow the cooler to be used without the lid

Drain Tube for attaching a drain hose (1/2" ID hose not provided)

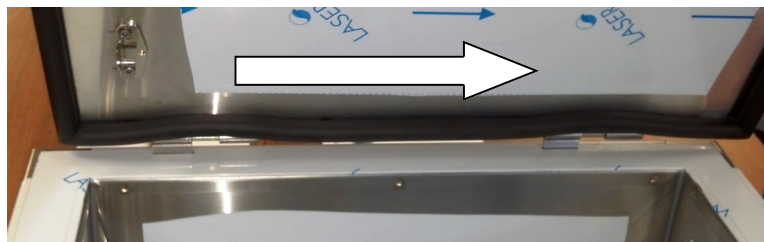

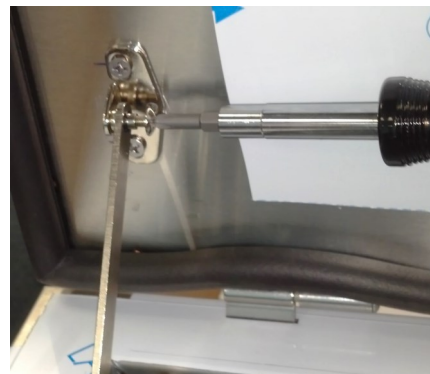

Installing the drain:

The drain tube assembly comes in a bubble wrapped package in the product carton. To install this drain you must remove the nut from the drain tube. From the inside of the cooler, push the drain tube through the insulating material blocking the drain hole. Push the drain tube all the way in until it stops at the black rubber washer. From the bottom of the cooler replace the nut onto the drain tube and tighten it all the way up to the bottom of the cooler. Tighten the nut to compress the black rubber washer to ensure a leak free seal. The drain tube can accommodate any standard size garden hose.

Removing the lid:

The lid is provided with a hydraulic type bracket which provides a slow close feature and can also hold the lid in the open position. This is a handy feature when stocking the cooler and allows for easy access to contents. To remove the lid for unrestricted access from all sides, use a Philips head screwdriver and remove the Philips head screw holding the bracket armature to the lid. Now slide the open lid to the right to disengage the hinge pins to remove the lid. Store the lid in a safe place to avoid damage. The armature can be folded and tucked out of the way inside the cooler.
