1. Introduction

The HDMI Extender over Single Cat6 extends high definition video and audio signals and one-way IR, at a distance of up to 164ft/50m over a single Cat6 cable. With only one cost effective Cat6 cable, high definition sources with HDMI outputs can be connected to high definition displays with HDMI inputs over long distances. DTS-HD or Dolby TrueHD audio is supported and compatible with the extender. In addition, the extender is also equipped with one-way pass-through IR which allows for source control and one HDMI loop output. The extender includes two units: transmitting unit and receiving unit. The Transmitting unit is responsible for capturing the HDMI input and carries the signals via one cost effective Cat6 cable, and reconstructing IR control signals. The receiving unit is responsible for equalizing the transmitted HDMI signal and transmitting IR control signals. The extender can copy the EDID signal from transmitter's or receiver's display device to source device by dip switch with the transmitter end, The extender offers the most convenient solution for HDMI extension over a single Cat6 with long distance capability, and is the perfect solution for any application.
