

# Karinear

# INDUCTION HOB

Instruction Manual / Installation Manual

MODEL :KNI-B23510

# SAFETY WARNINGS

Your safety is important to us. Please read this information before using your cooktop.

## INSTALLATION

### II Electrical Shock Hazard

- Disconnect the appliance from the mains electricity supply before carrying out any work or maintenance on it.
- Connection to a good system is essential and mandatory.
- Alterations to the domestic wiring system must only be made by a qualified electrician.
- Failure to follow this advice may result in electrical shock or death.

### II Important safety instructions

- Read these instructions carefully before installing or using this appliance.
- No combustible material or products should be placed on this appliance at any time.
- Please make this information available to the person responsible for installing the appliance as it could reduce your installation costs.
- In order to avoid a hazard, this appliance must be installed according to these instructions for installation.
- This appliance is to be properly installed and without earthed only by a suitably qualified person.
- This appliance should be connected to a circuit which incorporates an isolating switch providing full disconnection from the power supply.
- Failure to install the appliance correctly could invalidate any warranty or liability claims.

## OPERATION AND MAINTENANCE

### II Electrical Shock Hazard

- Do not cook on a broken or cracked cooktop. If the cooktop surface should break or crack, switch the appliance off immediately at the mains power supply (wall switch) and contact a qualified technician.
- Switch the cooktop off at the wall before cleaning or maintenance.

- Failure to follow this advice may result in electrical shock or death.

## **II Health Hazard**

- This appliance complies with electromagnetic safety standards.
- However, persons with cardiac pacemakers or other electrical implants (such as insulin pumps) must consult with their doctor or implant manufacturer before using this appliance to make sure that their implants will not be affected by the electromagnetic field.
- Failure to follow this advice may result in death.

## **II Hot Surface Hazard**

- During use, accessible parts of this appliance will become hot enough to cause burns.
- Do not let your body, clothing or any item other than suitable cookware contact the Induction glass until the surface is cool.
- Beware: magnetisable metal objects worn on the body may become hot in the vicinity of the cooktop. Gold or silver jewellery will not be affected.
- Keep children away.
- Handles of saucepans may be hot to touch. Check saucepan handles do not overhang other cooking zones that are on. Keep handles out of reach of children.
- Failure to follow this advice could result in burns and scalds.

## **II Cut Hazard**

- The razor-sharp blade of a cooktop scraper is exposed when the safety cover is retracted. Use with extreme care and always store safely and out of reach of children.
- Failure to use caution could result in injury or cuts.

## **II Important safety instructions**

- Never leave the appliance unattended when in use. Boilover causes smoking and greasy spillovers that may ignite.
- Never use your appliance as a work or storage surface.
- Never leave any objects or utensils on the appliance.
- Do not place or leave any magnetisable objects (e.g. credit cards, memory cards) or electronic devices (e.g. computers, MP3 players) near the appliance, as they may be affected by its electromagnetic field.

- Never use your appliance for warming or heating the room.
- After use, always turn off the cooking zones and the cooktop as described in this manual (i.e. by using the touch controls). Do not rely on the pan detection feature to turn off the cooking zones when you remove the pans.
- Do not allow children to play with the appliance or sit, stand, or climb on it.
- Do not store items of interest to children in cabinets above the appliance. Children climbing on the cooktop could be seriously injured.
- Do not leave children alone or unattended in the area where the appliance is in use.
- Children or persons with a disability which limits their ability to use the appliance should have a responsible and competent person to instruct them in its use. The instructor should be satisfied that they can use the appliance without danger to themselves or their surroundings.
- Do not repair or replace any part of the appliance unless specifically recommended in the manual. All other servicing should be done by a qualified technician.
- Do not use a steam cleaner to clean your cooktop.
- Do not place or drop heavy objects on your cooktop.
- Do not stand on your cooktop.
- Do not use pans with jagged edges or drag pans across the Induction glass surface as this can scratch the glass.
- Do not use scourers or any other harsh abrasive cleaning agents to clean your cooktop, as these can scratch the Induction glass.
- If the power supply cable is damaged, it must only be replaced by a qualified technician.
- This appliance is intended to be used in household and similar applications such as: -staff kitchen areas in shops, offices and other working environments; -farm houses; -by clients in hotels, motels and other residential type environments ; -bed and breakfast type environments.
- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction

concerning use of the appliance in a safe way and understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.

- **WARNING:** Unattended cooking on a hob with fat or oil can be dangerous and may result in fire. NEVER try to extinguish a fire with water, but switch off the appliance and then cover flame e.g. with a lid or a fire blanket.
- Metallic objects such as knives, forks, spoons and lids should not be placed on the hob surface since they can get hot.
- After use, switch off the hob element by its control and do not rely on the pan detector.
- The appliance is not intended to be operated by means of an external timer or separate remote-control system.

### CAUTION

- The cooking process has to be supervised. A short term cooking process has to be supervised continuously.

### WARNING

- In order to prevent tipping of the appliance, this stabilizing means must be installed. Refer to the instructions for installation.

### WARNING

- Use only hob guards designed by the manufacturer of the cooking appliance or indicated by the manufacturer of the appliance in the instruction for use as suitable or hob guards incorporated in the appliance. The use of inappropriate guards can cause accidents.

### Warning

- If the surface is cracked, switch off the appliance to avoid the possibility of electric shock, for hob surfaces of glass-ceramic or similar material which protect live parts

# CONGRATULATIONS

on the purchase of your new Induction Hob.

We recommend that you spend some time to read this Instruction / Installation Manual in order to fully understand how to install correctly and operate it.

For installation, please read the installation section.

Read all the safety instructions carefully before use and keep this Instruction / Installation Manual for future reference.

## PRODUCT OVERVIEW

### II Top View

1. 180mm/1800w Boost to 2000w
2. 160mm/1500w
3. Glass plate
4. Control panel

### II Control Panel

1. BOOST control
2. Front zone power regulating controls
3. Timer regulating controls
4. Rear zone power regulating controls
5. Child lock control
6. ON/OFF control

# A WORD ON INDUCTION COOKING

Induction cooking is a safe, advanced, efficient, and economical cooking technology. It works by electromagnetic vibrations generating heat directly in the pan, rather than indirectly through heating the glass surface. The glass becomes hot only because the pan eventually warms it up.

## II Before using your New Hob

- Read this guide, taking special note of the 'Safety Warnings' section.
- Remove any protective film that may still be on your Induction hob.

## II Using the Touch Controls

- The controls respond to touch, so you don't need to apply any pressure.
- Use the ball of your finger, not its tip.
- You will hear a beep each time a touch is registered.
- Make sure the controls are always clean, dry, and that there is no object (e.g. a utensil or a cloth) covering them. Even a thin film of water may make the controls difficult to operate.

## II Choosing the right Cookware

---

- Only use cookware with a base suitable for induction cooking.

Look for the induction symbol on the packaging or on the bottom of the pan.

• You can check whether your cookware is suitable by carrying out a magnet test. Move a magnet towards the base of the pan. If it is attracted, the pan is suitable for induction.

• If you do not have a magnet:

1. Put some water in the pan you want to check.

2. If  does not flash in the display and the water is heating, the pan is suitable.

• Cookware made from the following materials is not suitable: pure stainless steel, aluminium or copper without a magnetic base, glass, wood, porcelain, ceramic, and earthenware.

---

Do not use cookware with jagged edges or a curved base.

Make sure that the base of your pan is smooth, sits flat against the glass, and is the same size as the cooking zone. Use pans whose diameter is as large as the graphic of the zone selected. Using a pot a slightly wider energy will be used at its maximum efficiency. If you use smaller pot efficiency could be less than expected. Always centre your pan on the cooking zone.

Always lift pans off the Induction hob – do not slide, or they may scratch the glass.

## PAN DIMENSIONS

The cooking zones are up to a limit, automatically adapted to the diameter of the pan. However the bottom of this pan must have a minimum of diameter according to the corresponding cooking zone. To obtain the best efficiency of your hob, please place the pan in the centre of the cooking zone.

### II The base diameter of induction cookware

| Cooking zone | Minimum (mm) |
|--------------|--------------|
| 160mm        | 120          |
| 180mm        | 140          |

## USING YOUR HOB

### II To start cooking

1.Touch the ON/OFF control.

After power on, the buzzer beeps once, all displays show “ – ”, indicating that the induction hob has entered the state of standby mode.

2. Place a suitable pan on the cooking zone that you wish to use.

- Make sure the bottom of the pan and the surface Of the cooking zone are clean and dry.

3. The heating zone control only for indication, no need to touch.  
Turn the cooking zone on by touching + or -

## II If the display flashes alternately with the heat setting

This means that:

- you have not placed a pan on the correct cooking zone or,
- the pan you're using is not suitable for induction cooking or,
- the pan is too small or not properly centered on the cooking zone.

No heating takes place unless there is a suitable pan on the cooking zone.

The display will automatically turn off after 2 minutes if no suitable pan is placed on it.

4. set the power level

By touching the button + or - to select the power level.

\*If you don't choose a heat setting within 1 minute, the induction hob will automatically switch off. You will need to start again at step 1.

\*You can modify the heat setting at any time during cooking.

# LOCKING THE CONTROLS

- You can lock the controls to prevent unintended use (for example children accidentally turning the cooking zones on).
- When the controls are locked, all the controls except the ON/OFF control are disabled.

## II To lock the controls

Touch the child lock control . The timer indicator will show "Lo".

## II To unlock the controls

1. Make sure the hob is turned on.
2. Touch and hold the child lock control  for a while.
3. You can now start using your hob.

When the hob is in the lock mode, all the controls are disabled except the ON/OFF, you can always turn the induction hob off with the ON/OFF control in an emergency, but you shall unlock the hob first in the next operation

## WHEN YOU HAVE FINISHED COOKING

1. Turn the cooking zone off by touching to "0",  
make sure the display shows "0"

2. Beware of hot surfaces

H will show which cooking zone is hot to touch. It will disappear when the surface has cooled down to a safe temperature. It can also be used as an energy saving function if you want to heat further pans, use the hotplate that is still hot.

3. Turn the whole cooktop off by touching the ON/OFF control.

## USING THE BOOST (ONLY USE FOR THE REAR ZONE)

Boost is a function that can heat the selected area at a higher power for 5 minutes. So you can get a faster cooking. The Boost function is suitable for heating large volumes of water.

1. Turn the cooking zone on by touching + or -

2. Press the Boost button, the cooking area will begin operating in Boost mode (maximum power). The power display shows "P" to indicate that the zone is in boost mode

3. The Boost function will be active for 5 minutes. Then the power will return to the power 9.

4. If you want to cancel the Boost during 5 minutes, First select the cooking zone and then press the Boost button. Power returns to the set initially.

## USING THE TIMER

- You can use the timer to set it to turn one cooking zone off or more than one after the set time is up.
- You can set the timer for up to 99 minutes. If the setting time exceeds 99 minutes, the timer will automatically return to 0 minute.

### II Setting the timer to turn one cooking zone off

Cooking zones set for this feature will:

1. Touching the cooking zone on by touching + or - that you want to set the timer for.

2.Touch timer control , The minder indicator will start flashing and "30" will show in the timer display.

3.Set the time by touching + or - to select the timer.

int: Touch the "-" or "+" control of the timer once will decrease or increase by 1 minute.

Touch and hold the "-" or "+" control of the timer will decrease or increase by 10 minutes.

4. Touch the Timer control, the timer is canceled, and the"--" will show in the minute display.

5. When the time is set, it will begin to count down immediately. The display will show the remaining time and the timer indicator flash for 5 seconds.

**NOTE: The red dot next to power level indicator will illuminate indicating that zone is selected.**

6. Buzzer will beep for 30 seconds and the timer indicator shows "--" when the set time finished.

## II Setting the timer to turn more than one cooking zone off

1. If more than one heating zone use this function, the timer indicator will show the lowest time.

(e.g. zone1# setting time of 3 minutes, zone2# setting time of 6 minutes, the timer indicator shows "3".)

**NOTE: The red dot next to power level indicator will flash.**

If you want to check the set time of other heating zone, by touching the + or -, the timer will indicate its set time.

2. When cooking timer expires, the corresponding cooking zone will be switched off automatically and show "H".

**NOTE: If you want to change the time after the timer is set, you have to start from step 1**

## II Over-Temperature Protection

A temperature sensor equipped can monitor the temperature inside the Induction hob. When an excessive temperature is monitored, the Induction hob will stop operation automatically.

## II Detection of Small Articles

When an unsuitable size or non-magnetic pan (e.g. aluminium), or some other small item (e.g. knife, fork, key) has been left on the hob, the hob automatically go on to standby in 1 minute. The fan will keep cooking down the induction hob for a further 1 minute.

## II Auto Shutdown Protection

Auto shut down is a safety protection function for your hob. It shut down automatically if ever you forget to turn off your cooking. The default working times for various power levels are shown in the below table: .

|                              |   |   |   |   |   |   |   |   |   |
|------------------------------|---|---|---|---|---|---|---|---|---|
| Power level                  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| Default working timer (hour) | 8 | 8 | 8 | 4 | 4 | 4 | 2 | 2 | 2 |

**People with a heart pace maker should consult with their doctor before using this unit.**

# COOKING GUIDELINES

**Take care when frying as the oil and fat heat up very quickly, particularly if you're using high power. At extremely high temperature oil and fat will ignite spontaneously and this presents a serious fire risk.**

## II Cooking Tips

- When food comes to the boil, reduce the temperature setting.
- Using a lid will reduce cooking times and save energy by retaining the heat.
- Minimise the amount of liquid or fat to reduce cooking times.
- Start cooking on a high setting and reduce the setting when the food has heated through.

## II Simmering, cooking rice

- Simmering occurs below boiling point, at around 85°C, when bubbles are just rising occasionally to the surface of the cooking liquid. It is the key to delicious soups and tender stews because the flavours develop without overcooking the food. You should also cook egg-based and flourthickened sauces below boiling point.
- Some tasks, including cooking rice by the absorption method, may require a setting higher than the lowest setting to ensure the food is cooked properly in the time recommended.

## II Searing steak

To cook juicy flavoursome steaks:

1. Stand the meat at room temperature for about 20 minutes before cooking.
2. Heat up a heavy-based frying pan.
3. Brush both sides of the steak with oil. Drizzle a small amount of oil into the hot pan and then lower the meat onto the hot pan.
4. Turn the steak only once during cooking. The exact cooking time will depend on the thickness of the steak and how cooked you want it. Times may vary from about 2 – 8 minutes per side. Press the steak to gauge how cooked it is – the firmer it feels the more 'well done' it will be.
5. Leave the steak to rest on a warm plate for a few minutes to allow it to relax and become tender before serving.

## II For stir-frying

1. Choose an induction compatible flat-based wok or a large frying pan.
2. Have all the ingredients and equipment ready. Stir-frying should be quick. If cooking large quantities, cook the food in several smaller batches.
3. Preheat the pan briefly and add two tablespoons of oil.
4. Cook any meat first, put it aside and keep warm.
5. Stir-fry the vegetables. When they are hot but still crisp, turn the cooking zone to a lower setting, return the meat to the pan and add your sauce.
6. Stir the ingredients gently to make sure they are heated through.
7. Serve immediately.

## HEAT SETTINGS

The settings below are guidelines only. The exact setting will depend on several factors, including your cookware and the amount you are cooking. Experiment with the induction hob to find the settings that best suit you.

| Heat setting | Suitability                                                                                                                                                                                                     |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 - 2        | <ul style="list-style-type: none"><li>• delicate warming for small amounts of food</li><li>• melting chocolate, butter, and foods that burn quickly</li><li>• gentle simmering</li><li>• slow warming</li></ul> |
| 3 - 4        | <ul style="list-style-type: none"><li>• reheating</li><li>• rapid simmering</li><li>• cooking rice</li></ul>                                                                                                    |
| 5 - 6        | <ul style="list-style-type: none"><li>• pancakes</li></ul>                                                                                                                                                      |
| 7 - 8        | <ul style="list-style-type: none"><li>• sauteing</li><li>• cooking pasta</li></ul>                                                                                                                              |
| 9            | <ul style="list-style-type: none"><li>• stir-frying</li><li>• searing</li><li>• bringing soup to the boil</li><li>• boiling water</li></ul>                                                                     |

# CARE AND CLEANING

| What?                                                                                                      | How?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Important!                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Everyday soiling on glass (fingerprints, marks, stains left by food or non-sugary spillovers on the glass) | <ol style="list-style-type: none"> <li>1. Switch the power to the cooktop off.</li> <li>2. Apply a cooktop cleaner while the glass is still warm (but not hot!)</li> <li>3. Rinse and wipe dry with a clean cloth or paper towel.</li> <li>4. Switch the power to the cooktop back on.</li> </ol>                                                                                                                                                                                                                                                  | <ul style="list-style-type: none"> <li>• When the power to the cooktop is switched off, there will be no 'hot surface' indication but the cooking zone may still be hot! Take extreme care.</li> <li>• Heavy-duty scourers, some nylon scourers and harsh/abrasive cleaning agents may scratch the glass. Always read the label to check if your cleaner or scourer is suitable.</li> <li>• Never leave cleaning residue on the cooktop: the glass may become stained.</li> </ul> |
| Boilovers, melts, and hot sugary spills on the glass                                                       | <p>Remove these immediately with a fish slice, palette knife or razor blade scraper suitable for ceramic glass cooktops, but beware of hot cooking zone surfaces:</p> <ol style="list-style-type: none"> <li>1. Switch the power to the cooktop off at the wall.</li> <li>2. Hold the blade or utensil at a 30° angle and scrape the soiling or spill to a cool area of the cooktop.</li> <li>3. Clean the soiling or spill up with a dish cloth or paper towel.</li> <li>4. Follow steps 2 to 4 for 'Everyday soiling on glass' above.</li> </ol> | <ul style="list-style-type: none"> <li>• Remove stains left by melts and sugary food or spillovers as soon as possible. If left to cool on the glass, they may be difficult to remove or even permanently damage the glass surface.</li> <li>• Cut hazard: when the safety cover is retracted, the blade in a scraper is razor-sharp. Use with extreme care and always store safely and out of reach of children.</li> </ul>                                                      |
| Spillovers on the touch controls                                                                           | <ol style="list-style-type: none"> <li>1. Switch the power to the cooktop off.</li> <li>2. Soak up the spill</li> <li>3. Wipe the touch control area with a clean damp sponge or cloth.</li> <li>4. Wipe the area completely dry with a paper towel.</li> <li>5. Switch the power to the cooktop back on.</li> </ol>                                                                                                                                                                                                                               | <ul style="list-style-type: none"> <li>• The cooktop may beep and turn itself off, and the touch controls may not function while there is liquid on them. Make sure you wipe the touch control area dry before turning the cooktop back on.</li> </ul>                                                                                                                                                                                                                            |

# HINTS AND TIPS

| Problem                                                                       | Possible causes                                                                                                                                                                                                      | What to do                                                                                                                                                                                                                         |
|-------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| The cooktop cannot be turned on.                                              | No power.                                                                                                                                                                                                            | Make sure the cooktop is connected to the power supply and that it is switched on. Check whether there is a power outage in your home or area. If you've checked everything and the problem persists, call a qualified technician. |
| The touch controls are unresponsive.                                          | The controls are locked.                                                                                                                                                                                             | Unlock the controls. See section 'Using your ceramic cooktop' for instructions.                                                                                                                                                    |
| The slider controls are difficult to operate.                                 | There may be a slight film of water over the controls or you may be using the tip of your finger when touching the controls.                                                                                         | Make sure the slide control area is dry and use the ball of your finger when touching the controls.                                                                                                                                |
| The glass is being scratched.                                                 | Rough-edged cookware.<br>Unsuitable, abrasive scourer or cleaning products being used.                                                                                                                               | Use cookware with flat and smooth bases. See 'Choosing the right cookware'.<br>See 'Care and cleaning'.                                                                                                                            |
| Some pans make crackling or clicking noises.                                  | This may be caused by the construction of your cookware (layers of different metals vibrating differently).                                                                                                          | This is normal for cookware and does not indicate a fault.                                                                                                                                                                         |
| The induction hob makes a low humming noise when used on a high heat setting. | This is caused by the technology of induction cooking.                                                                                                                                                               | This is normal, but the noise should quieten down or disappear completely when you decrease the heat setting.                                                                                                                      |
| Fan noise coming from the induction hob.                                      | A cooling fan built into your induction hob has come on to prevent the electronics from overheating. It may continue to run even after you've turned the induction hob off.                                          | This is normal and needs no action. Do not switch the power to the induction hob off at the wall while the fan is running.                                                                                                         |
| Pans do not become hot and <u>U</u> appears in the display.                   | The induction hob cannot detect the pan because it is not suitable for induction cooking.<br><br>The induction hob cannot detect the pan because it is too small for the cooking zone or not properly centred on it. | Use cookware suitable for induction cooking. See section 'Choosing the right cookware'.<br><br>Centre the pan and make sure that its base matches the size of the cooking zone.                                                    |

| Problem                                                                                                                                                                                           | Possible causes  | What to do                                                                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| The induction hob or a cooking zone has turned itself off unexpectedly, a tone sounds and an error code is displayed (typically alternating with one or two digits in the cooking timer display). | Technical fault. | Please note down the error letters and numbers, switch the power to the induction hob off at the wall, and contact a qualified technician. |

Never attempt to disassemble the unit by yourself.

## FAILURE DISPLAY AND INSPECTION

If an abnormality comes up, the induction hob will enter the protective state automatically and display corresponding protective codes:

| Problem | Possible causes                                           | What to do                                                                                            |
|---------|-----------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| F3/F4   | Temperature sensor of the induction coil failure          | Please contact the supplier: karinear_service@163.com                                                 |
| FA      | Temperature sensor of the IGBT failure.                   | Please contact the supplier: karinear_service@163.com                                                 |
| E1/E2   | Abnormal supply voltage                                   | Please inspect whether power supply is normal. Power on after the power supply is normal.             |
| E3      | High temperature of the induction coil temperature sensor | Please check if dry burning,if still haven't solve,pls contact the supplier: karinear_service@163.com |
| E5      | High temperature of the IGBT temperature sensor           | Please restart after the hob cools down.                                                              |

The above are the judgment and inspection of common failures.

Please do not disassemble the unit by yourself to avoid any dangers and damages to the induction hob.

# HEAT SETTINGS

|                                    |                    |
|------------------------------------|--------------------|
| Cooking Hob                        | KNI-B23510         |
| Cooking Zones                      | 2 Zones            |
| Supply Voltage                     | 220-240V~, 50-60Hz |
| Installed Electric Power           | 3500W              |
| Product Size        L×W×H(mm)      | 290X520X61         |
| Building-in Dimensions    A×B (mm) | 270X490            |

Weight and Dimensions are approximate. Because we continually strive to improve our products we may change specifications and designs without prior notice.

# INSTALLATION

## II Selection of installation equipment

Cut out the work surface according to the sizes shown in the drawing. For the purpose of installation and use, a minimum of 5 cm space shall be preserved around the hole.

Be sure the thickness of the work surface is at least 30mm. Please select heat-resistant work surface material to avoid larger deformation caused by the heat radiation from the hotplate. As shown below:

| L(mm) | W(mm) | H(mm) | D(mm) | A(mm) | B(mm) | X(mm)   |
|-------|-------|-------|-------|-------|-------|---------|
| 290   | 520   | 61    | 56    | 270   | 490   | 50 mini |

Under any circumstances, make sure the Induction cooker hob is well ventilated and the air inlet and outlet are not blocked. Ensure the Induction cooker hob is in good work state. As shown below

**Note: The safety distance between the hotplate and the cupboard above the hotplate should be at least 760mm.**

| A(mm) | B(mm)   | C(mm)   | D          | E             |
|-------|---------|---------|------------|---------------|
| 760   | 50 mini | 30 mini | Air intake | Air exit 5 mm |

## **II Before you install the hob, make sure that**

- the work surface is square and level, and no structural members interfere with space requirements
- the work surface is made of a heat-resistant material
- if the hob is installed above an oven, the oven has a built-in cooling fan
- the installation will comply with all clearance requirements and applicable standards and regulations
- a suitable isolating switch providing full disconnection from the mains power supply is incorporated in the permanent wiring, mounted and positioned to comply with the local wiring rules and regulations.

The isolating switch must be of an approved type and provide a 3 mm air gap contact separation in all poles (or in all active [phase] conductors if the local wiring rules allow for this variation of the requirements)

- the isolating switch will be easily accessible to the customer with the hob installed
- you consult local building authorities and by-laws if in doubt regarding installation
- you use heat-resistant and easy-to-clean finishes (such as ceramic tiles) for the wall surfaces surrounding the hob.

II When you have installed the hob, make sure that

- the power supply cable is not accessible through cupboard doors or drawers
- there is adequate flow of fresh air from outside the cabinetry to the base of the hob
- if the hob is installed above a drawer or cupboard space, a thermal protection barrier is installed below the base of the hob
- the isolating switch is easily accessible by the customer

II Before locating the fixing brackets

The unit should be placed on a stable, smooth surface (use the packaging). Do not apply force onto the controls protruding from the hob.

II Adjusting the bracket position

1.Fix the hob on the work surface by screw 4 brackets on the bottom of hob(see picture) after installation.

| A     | B       | C          | D    |
|-------|---------|------------|------|
| screw | bracket | Screw hole | base |

II Cautions

1. The induction hotplate must be installed by qualified personnel or technicians. We have professionals at your service. Please never conduct the operation by yourself.
2. The hob will not be installed directly above a dishwasher, fridge, freezer, washing machine or clothes dryer, as the humidity may damage the hob electronics
3. The induction hotplate shall be installed such that better heat radiation can be ensured to enhance its reliability.
4. The wall and induced heating zone above the table surface shall withstand heat.

5. To avoid any damage, the sandwich layer and adhesive must be resistant to heat.

## II Before locating the fixing brackets

This hob must be connected to the mains power supply only by a suitably qualified person.

Before connecting the hob to the mains power supply, check that:

1. the domestic wiring system is suitable for the power drawn by the hob.
2. the voltage corresponds to the value given in the rating plate
3. the power supply cable sections can withstand the load specified on the rating plate.

To connect the hob to the mains power supply, do not use adapters, reducers, or branching devices, as they can cause overheating and fire.

The power supply cable must not touch any hot parts and must be positioned so that its temperature will not exceed 75°C at any point.

Check with an electrician whether the domestic wiring system is suitable without alterations. Any alterations must only be made by a qualified electrician.

The power supply should be connected in compliance with the relevant standard, or a single-pole circuit breaker. The method of connection is shown below.

### Power line use 16A H07RN-F, 2\*1.5mm<sup>2</sup>

## Recycling and Disposal

### Environmental Protection

Waste electrical products should not be disposed of with household waste. Please recycle where facilities exist. Check with your Local Authority or retailer for recycling advice.

2

## Recycling and Disposal

The symbol on the product or its packaging indicates that this product cannot be treated as normal household waste. This product must be handed over to an electric and electronic equipment collection point for recycling.

On ensuring that this product is disposed of correctly, you will help to avoid possible negative consequences for the environment and public health, which could occur if this product is not handled correctly. To receive more detailed information about recycling this product, contact your local government, domestic waste disposal services or the outlet where the product was bought.
