CE Warning

Health and Safety

Warning! To avoid electric shock and damage to your device do not charge device while it is wet or in an area where it could get wet. Do not handle device, charger or cords with wet hands while charging.

CAUTION: RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING

Correct disposal

This marking on the product accessories or literature indicates that the product and its electronic accessories (e.g. charger/headset/USB cable) should not be disposed of with other household waste.

This marking on the battery manual or packaging indicates that the batteries in this product should not be disposed of with other household waste.

Care for the environment! Must not be discarded with household waste!

Tests for SAR are conducted using standard operating positions with the device transmitting at its highest certified power level in all tested frequency bands. The maximum SAR values listed on this device when used in its normal position when used close to the body at a maximum distance of 0mm are:

Max SAR (W/kg):	1.6W/kg	1.16W/kg
Limit is 1.0W/kg for 2g		

FCC Caution

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules that devices comply with two main conditions:

1.They must not cause harmful interference.

2.They must accept any interference received,including that which may cause undesired operation.

This product meets the government's requirements for exposure to radio waves. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons regardless of age or health.

FCC RF exposure information and statement the SAR limit of USA/FCC: SAR (W/kg) averaged over one gram of this Device GR2019FCC ID: 2A0WKG-GR2019 has been tested against this SAR limit. The SAR information related to this aspect can be viewed online at: <http://www.fcc.gov/oet/ea/fccid/>. Please use the device FCC ID number for search. This device was tested for typical operations: 0mm from the body. To maintain compliance with FCC RF exposure requirements, 0mm separation distance should be maintained to the user's bodies.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.

- Increase the separation between the equipment and receiver.

- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

- Consult the dealer or an experienced radio/TV technician for help.

IC Caution

EN

This device contains licence-exempt transmitter(s) / receiver(s) that comply with Innovation, Science and Economic Development Canada's licence-exempt RSS(s).

Operation is subject to the following two main conditions:

1.They must not cause harmful interference.

2.They must accept any interference received, including that which may cause undesired operation.

SAR Statement: Walkie Talkie has been tested and meets applicable limits for radio frequency (RF) exposure. Specific Absorption Rate (SAR) refers to the rate at which the body absorbs RF energy. The SAR limit is 1.6 watts per kilogram in Canada that set the limit averaged over 1 gram of tissue. During testing, Walkie Talkie (IC: 1256A4-GR2001) radios are set to their highest transmission levels and placed in positions that simulate users against the head, with no separation, and when worn or carried against the torso of the body, with 0mm separation. To reduce exposure to RF energy, users have hands-free options such as the built-in speaker phone, the supplied headphones, or other similar accessories. Cases with metal parts may change the RF performance of the device, including its compliance with RF exposure guidelines, in a manner that has not been tested or certified. Although this device has been tested to determine SAR in each band of operation, not all bands are available in all areas. Bands are dependent on your service provider's wireless and roaming networks.

FR

L'émetteur /récepteur exempt de licence contenu dans le présent appareil est conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence.

L'exploitation est autorisée aux deux conditions suivantes:

1.L'appareil ne doit pas produire de brouillage.

2.L'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Déclaration SAR: Le walkie-talkie a été testé et respecte les limites applicables d'exposition aux radiofréquences (RF). Le débit d'absorption spécifique (SAR) désigne la vitesse à laquelle le corps absorbe l'énergie des radiofréquences. Au Canada, la limite du DAS est de 1,6 watts par kilogramme, la moyenne étant calculée sur 1 gramme de tissu. Lors des tests, les radios de walkie-talkie (IC : 1256A4-GR2001) sont réglées sur leur niveau d'émission le plus élevé et placées dans des positions simulant une utilisation contre à tête, sans séparation, et lorsqu'elles sont portées ou transportées contre le torse du corps, avec une séparation de 0 mm. Pour réduire l'exposition à l'énergie RF, utilisez une option mains libres, telle que le haut-parleur intégré, les écouteurs fournis ou d'autres accessoires similaires. Les étuis comportant des pièces métalliques peuvent modifier les performances RF de l'appareil, d'une manière qui n'a pas été testée ou certifiée. Bien que cet appareil ait été testé pour déterminer le DAS dans chaque bande de fonctionnement, toutes les bandes ne sont pas disponibles dans toutes les régions. Les bandes dépendent des réseaux sans fil et d'itinérance de votre fournisseur de services.
