IMPORTANT INSTRUCTIONS

READ ALL INSTRUCTIONS BEFORE USING THE HEATER.

When using electrical heaters, basic precautions should always be followed to reduce the risk of fire, electric shock, injury to persons, and hyperthermia, including the following:

CAUTION

1. Read all instructions before using heater.
2. Extreme caution is necessary when any heater is used by or near children or invalids, and whenever the heater is left operating and unattended.
3. **CAUTION:** This unit has a polarized plug (one blade is wider than the other). To reduce the risk of shock, this plug is intended to fit only one way in a polarized outlet. If the plug does not fit fully in the outlet, reverse the plug. If it still does not fit, contact a qualified electrician. DO NOT attempt to defeat this safety feature. To do so could result in an electric shock hazard.
4. **CAUTION:** It is normal for the plug to feel warm to the touch; however, a loose fit between the AC outlet (receptacle) and plug may cause overheating and distortion of the plug. Contact a qualified electrician to replace a loose or worn outlet.
5. **CAUTION:** Always plug heaters directly into a wall outlet/receptacle. Never use with an extension cord or reloadable power tap (outlet/power strip).
6. **CAUTION:** TO PREVENT ELECTRIC SHOCK, MATCH WIDE BLADE OF PLUG TO WIDE SLOT AND FULLY INSERT.

WARNING

1. This heater is hot when in use. To avoid burns, do not let bare skin touch hot surfaces. If provided, always use handles when moving this heater. Keep combustible materials such as furniture, pillows, bedding, papers, clothes and curtains at least 3 feet (0.9m) from the front of the heater and keep them away from the sides and rear.
2. Always unplug the heater when not in use.

3. Do not operate any heater with a damaged cord or plug or after the heater malfunctions, has been dropped or damaged in any manner. Discard heater or return heater to authorized service facility for examination, electrical or mechanical adjustment, or repair.
4. Do not use the heater outdoors.
5. This heater is not intended for use in bathroom, laundry areas and similar moist indoor locations. Never locate heater where it may fall into a bathtub or other water container.
6. Do not run cord under carpeting. Do not cover cord with throw rugs, runners, or similar coverings. Do not route cord under furniture or appliances. Arrange cord away from traffic area and where it will not be tripped over.
7. This heater draws 10 amps during operation. To prevent overloading a circuit, do not plug the heater into a circuit that already has other appliances plugged in.
8. To disconnect the heater, first turn controls to off, then remove plug from outlet. Never pull by the cord.
9. Do not insert or allow foreign objects to enter any ventilation or exhaust opening as this may cause an electric shock, fire or damage to the heater.
10. To prevent a possible fire, do not block air intakes or exhaust in any manner. Do not use on soft surfaces, like a bed, where openings may become blocked.
11. A heater has hot and arcing or sparking parts inside. Do not use it in areas where gasoline, paint, or flammable liquids are used or stored.
12. Use this heater only as described in this manual. Any other use not recommended by the manufacturer may cause fire, electric shock, or injury to persons.
13. The output of this heater may vary and its temperature may become intense enough to burn exposed skin. Use of this heater is not recommended for persons with reduced sensitivity to heat or an inability to react to avoid burns.
14. Hyperthermia can result in death. Symptoms of hyperthermia include high body temperature, headache, nausea, vomiting, tiredness, dizziness, fainting, and rapid pulse. If you begin to experience symptoms related to hyperthermia, turn off the heater and seek medical attention.

15. To avoid excessive room temperatures which can cause hyperthermia: DO NOT leave product running unattended in a confined space around infants, or individuals with reduced physical, sensory, or mental capabilities.

NOTE: It is normal for the heater to cycle on and off as it maintains the preset temperature. To prevent the unit from cycling on/off, adjust the temperature setting clockwise towards MAX.

If the heater overheats due to abnormal conditions or incorrect operation, the temperature control system will automatically cut off the power to ensure safety. After the heater cools down, you must unplug it and then plug it back in to restart and resume normal use.

B. Tip-over Protection:

The heater is equipped with a tip-over safety switch. If the heater tips over, it will automatically shut off. If this happens, simply place the heater back in its upright position, and it will resume normal operation.
