Exterior Colorways

Customize your stainless steel color.

Colderatti stainless steel systems come in natural brushed stainless steel, but we offer custom exterior colors using an ultra-hard PVD metallic finishing process to match your brand's aesthetic.

Standard PVD Colors – $1,200

Natural

Cinnamon

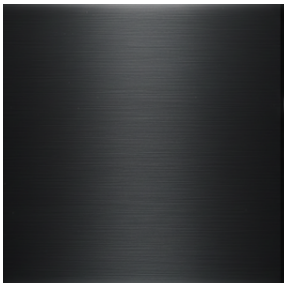

Chocolate

Aged Copper

Olive Oil Gold

Wine Red

Royal Blue

Graphite Black

Special PVD Colors – $2,200

Finishes outside of our standard selection, and custom color-matching

While PVD technology offers a diverse spectrum, the palette is governed by specific chemical and physical constraints. For requests outside our standard library, we can identify the closest achievable match, provided a reference. To ensure complete confidence, we provide visual samples of the best-matched finish for approval prior to production.

Remote Chiller Placement

Place your chiller remotely from the machine in a nearby maintenance closet, utility room, or equipment pad.

Remote: Up to 40 feet Run Length – $400/line

Depending on your floorplan and desired run length, we can provide you with custom-length insulated water lines.

Adjacent: 5 feet – Included

Standard package includes 5-foot insulated flexible lines, designed for adjacent chiller placement.

Install Configuration

Our Pro systems are designed for versatile installation options.

Plumbing Interface:

- **No-Plumbing**
  No plumbing is needed with our Pro systems. Fill and drain with a standard hose. An optional submersible pump enables efficient long-range drainage.

- **Integrated Plumbing**
  For a fully integrated setup (like a bathtub), use the dedicated FILL and DRAIN hydraulic connections on the tub and plumb directly into site water supply and drainage. You can also fill with wall or ceiling-mounted fixtures.

Placement:

- **Freestanding Install (Above-Ground)**
  Standalone, above-ground installation. Place in your wellness space with minimal site prep.

- **Recessed Install (In-Ground)**
  The system can be fully integrated and built-in to the tile/flooring. The basin is fully insulated and structurally reinforced for permanent built-in tile or stone surrounds. The chiller engine can be placed remotely with conduits running the chiller to the tub.
