SMART ACCESS CONTROL

ADVANTAGES

The DoorBird A1122 is a compact, IP-based multi-technology access control system that can also be installed as a stand-alone solution. It enables secure access control in areas where the installation of an IP video door station is not possible or desired, e.g. at back and side doors, garages and underground garages, storage and packing rooms or bicycle and machine rooms. It can also control elevators.

Thanks to its compact shape, the device can be easily installed on a door frame. In addition, the fingerprint reader has a locking mechanism which prevents attempts at manipulation, temporarily locking the system after multiple unauthorized access attempts. To increase the security even more, you can securely release a detached relay with the DoorBird I/O Door Controller A1081.

The device is designed for indoor and outdoor installation. Our front panel is made of solid 3 mm (0.12 in) brushed stainless steel.

The DoorBird A1122 combines the functions of three separate access control devices:

- 125 KHz RFID Reader
- 13.56 MHz RFID Reader
- Fingerprint
- Bluetooth®

FINGERPRINT READER FEATURES

- Touch sensor
- Configurable via App or web-based dashboard
- Status LED (RGB)
- 1,000 times more secure than a 4-digit keypad PIN code
- Manipulation prevention system
- Event history with time stamp
- No more misplaced, forgotten, lost or stolen keys possible
- No unauthorized use of PIN codes or RFID key fobs possible, a fingerprint is unique per person
- Personalized time frames and actions
- Supported number of fingerprints (template storage): 50

The DoorBird A1122 can be connected to the network via WLAN or LAN cable. If connected using a network cable, the device can be powered via Power over Ethernet (PoE). Should the Internet temporarily fail, all functions continue to operate within the local network.

Apart from the network connection and power supply (PoE or 15 VDC), no further hardware is required. The software for the IP access control solution runs within the device.

The DoorBird A1122 is equipped with two relays and has a configurable Wiegand output interface for integration into an existing access control or alarm system.

Using HTTP(S) calls, you can also integrate the device with third-party home and building automation systems.

All settings can be configured remotely using the free DoorBird app or our web-based administration tool: https://webadmin.doorbird.com

You can define individual schedules, validities and actions for each fingerprint, RFID transponder, etc. By pairing the DoorBird IP access control device with our DoorBird IP I/O Door Controller A1081, up to three additional gates, doors or elevators can be controlled in a tamperproof way, even if they are not located near the device.

The integrated tamper sensor can detect that the device is being removed and, for example, send a push message as an alarm in real time.
