 - Remove the doors.
 - Leave the shelves in place to prevent children from climbing inside.

DANGER

- The refrigerator must be disconnected from the main power supply before installing any accessories.
- Refrigerant and cyclopentane foam used in this appliance are flammable. When the appliance is scrapped, keep it away from all fire sources. It must be recycled by a qualified recycling facility and must not be disposed of by incineration. Proper recycling prevents environmental damage and other safety hazards.

SAVE THESE INSTRUCTIONS

THIS APPLIANCE IS FOR HOUSEHOLD USE ONLY

State of California Proposition 65 Warnings:

WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

IMPORTANT:

Flammable gas and refrigerant are used. It is the consumer's responsibility to comply with Federal and Local regulations when disposing of this product. Refrigerants must be disposed of a licensed, EPA-certified refrigerant technician in accordance with established procedures.

Electricity-Related Warnings

- Do not pull the power cord when pulling the power plug of the refrigerator. Firmly grasp the plug and pull out from the socket.
- To ensure safe use, do not damage the power cord or use the power cord when it is damaged or worn.
- Use a dedicated power socket; the power socket should not be shared with other electrical appliances.
- The power cord must be fully and securely inserted into the outlet to prevent a potential fire hazard.
- Ensure that the power outlet has a proper grounding connection.
- If you smell gas or detect leaking flammable substances, turn off the gas valve immediately and ventilate the area by opening doors and windows. Do not unplug the refrigerator or operate any electrical switches, as doing so may create a spark and cause a fire.
- Do not use electrical appliances on top of the appliance, unless recommended by the manufacturer.

Warnings Related to Placing Items

- Do not place flammable, explosive, volatile or highly corrosive items in the refrigerator to prevent damage to the product and fire accidents.
- To avoid the risk of fire, do not place flammable items near the refrigerator.
- This product is a household refrigerator and is only suitable for the storage of food. According to national standards, a household refrigerator should not be used for other purposes, such as the storage of blood, drugs or biological products.
- Do not store beer, beverages, or other liquids in bottles or sealed containers in the freezer compartment. The liquid may expand as it freezes, causing the container to crack and potentially damage the appliance.

Warnings for Use

- Do not arbitrarily disassemble or reconstruct the refrigerator, nor damage the refrigerant circuit; maintenance of the appliance must be conducted by a specialist.
- If the power cord is damaged, it must be replaced by a manufacturer, service agent, or another qualified in order to avoid a hazard.
- The gaps between refrigerator door and body are small. Do not place your hands in these areas to prevent squeezing your fingers. Be careful when opening the refrigerator door to avoid objects from falling out.

- Do not handle food or containers with wet hands in the freezer compartment while the refrigerator is operating. Contact with cold surfaces—especially metal containers—may cause frost-bite.
- Do not allow children to enter or climb inside the refrigerator. This can lead to entrapment, suffocation, or injury if the refrigerator tips over.
- Do not spray or wash the refrigerator with water. Do not place the appliance in damp areas where it may be exposed to splashing water, as this can damage the electrical insulation and create a safety hazard.
- Do not place heavy objects on top of the refrigerator. Items may fall when the door is opened and could cause injury.
- Unplug the refrigerator during a power outage or before cleaning. After unplugging, wait at least five minutes before reconnecting the unit to prevent compressor damage from rapid, repeated starts.

Safe Refrigeration & Storage Practices

1. Refrigerators may not operate consistently—and freezer temperatures may rise or cause partial defrosting—if the appliance is set for extended periods below the lower limit of its designed temperature range.
2. Do not store sparkling beverages in the freezer or in compartments intended for very low temperatures, as the containers may burst. Certain drinks, such as ice water, should also not be consumed when excessively cold.
3. Follow the storage times recommended by food manufacturers for all types of food, especially commercially quick-frozen products kept in freezer compartments.
4. During defrosting, prevent frozen food from warming too quickly by placing it in an insulated container or covering it with towels to maintain its temperature.
5. Any rise in the temperature of frozen food during manual defrosting, maintenance, or cleaning may reduce its storage life.

Disposal

Refrigerant and cyclopentane foaming material used for the refrigerator are flammable. Therefore, when the refrigerator is done with, it should be kept away from any fire source and be recycled by a special recycling company with corresponding qualifications other than be disposed by combustion, so as to prevent damage to the environment or any other harm.

When the refrigerator is disposed, disassemble the doors, remove gaskets of door and shelves. Place the doors and shelves in a proper place to prevent trapping children.

Correct Disposal of this product:

This marking indicates that this product should not be disposed with other household waste. To prevent possible harm to the environment or human health from uncontrolled waste disposal, recycle it responsibly to promote the sustainable reuse of material resources.

Installation

Placement

- Before use, remove all packing materials, including bottom pads, foam inserts, and any tape inside the refrigerator. Peel off the protective film from the doors and the exterior surfaces of the refrigerator.
- Keep the refrigerator away from heat sources and direct sunlight. Do not place it in damp or wet locations, as moisture can cause rust and reduce the unit's insulating performance.
- Do not spray or wash the refrigerator with water, and avoid installing it where it may be exposed to splashing. Water exposure can damage the electrical insulation and create a safety hazard.
- Place the refrigerator in a well-ventilated indoor location. The floor must be flat and sturdy; adjust the leveling feet as needed to stabilize the unit.
- Allow at least 12 inches (30 cm) of clearance above the refrigerator and at least 4 inches (10 cm) between the back of the unit and the wall to ensure proper heat dissipation.
- Provide adequate space around the refrigerator so the doors and drawers can open fully, following the installation guidance provided by the distributor.

Note

This refrigerator is designed for freestanding use only and must not be installed inside cabinetry or used as a built-in appliance. Enclosing the unit can obstruct ventilation, leading to poor performance, overheating, and reduced product lifespan.

Energy Saving Tips

- The appliance should be located in the coolest area of the room, away from heat producing appliances or heating ducts, and out of direct sunlight.
- Let hot food cool down to room temperature before placing it in the appliance. Overloading the appliance forces the compressor to run longer. Food that freezes too slow may lose its quality, or spoil.
- Be sure to wrap food properly, and wipe containers dry before placing them in the appliance. This cuts down on frost build-up inside the appliance.
- Appliance storage bins should not be lined with tin foil, wax paper, or paper toweling. Liners interfere with the cold air circulation, making the appliance less efficient.
- Organize and label food to reduce door openings and extended searches. Remove as many items as needed at one time, and close the door as soon as possible.

Changing the Light

Any replacement or maintenance of the LED lights is intended to be made by the manufacturer, service agents or another qualified person.

The light source in this product is only to be replaced by qualified engineers.

Light Replacement Instructions:

	1. Unplug the refrigerator.
	2. Remove the light cover using a screwdriver.
	3. Take out the light panel.
	4. Disconnect the wiring connector.

Start-Up Instructions

- Before using the refrigerator for the first time, let it stand upright for at least 2 hours before connecting it to the power supply.
- Allow the refrigerator to run for 2–3 hours before placing any fresh or frozen food inside. In hot weather or during summer months, let it run for 4 hours or more to ensure proper cooling.

Climate Class Information

Refrigerators are designed to operate within specific ambient temperature ranges, determined by their climate class. The climate class for your appliance can be found on the rating label inside the refrigerator.

This appliance may not perform properly if used in temperatures outside the range specified for its climate class.

Effective Temperature Range

Your refrigerator will function optimally only within the ambient temperature range defined by its climate class. Refer to the climate class table below for the appropriate operating temperatures.

Class	Symbol	Ambient Temperature Range °F	
		IEC 62552 (ISO 15502)	ISO 8561
Extended Temperature	SN	+50°F to +89.6°F	+50°F to +89.6°F
Temperature	N	+60.8°F to +89.6°F	+60.8°F to +89.6°F
Subtropical	ST	+60.8°F to +100.4°F	+60.8°F to +100.4°F
Tropical	T	+60.8°F to +109.4°F	+60.8°F to +109.4°F

 **Note:** The cooling performance and power consumption of the refrigerator may be affected by the ambient temperature, the door-opening frequency, and the location of the refrigerator. We recommend adjusting the temperature settings as appropriate.

Refrigerator Compartment

- The refrigerator compartment is suitable for storing fruits, vegetables, beverages, and other short-term foods. Keep vegetables away from the cold-air outlet to prevent freezing.
- Allow hot food to cool to room temperature before placing it in the refrigerator.
- It is recommended to store all food in sealed containers before placing it inside the appliance.
- The glass shelves can be adjusted up or down to provide flexible storage space and easier access.

Freezer Compartment

- The low-temperature freezer compartment is designed for long-term food preservation and is mainly used for storing frozen foods.
- It is suitable for storing meat, fish, and other items that are not intended to be consumed in the near term.
- For best results, divide meat into smaller portions before freezing to speed up the freezing process and make it easier to access later. Always consume food within its recommended storage period.

IMPORTANT:

For best energy efficiency, keep drawers, food bins, shelves, and other components arranged in the positions shown in the illustration.

Note

Storing too much food immediately after first connecting the refrigerator to power may reduce cooling performance. Do not block the air outlet with food items, as this will also affect the freezer's ability to cool properly.

When the temperature is set to the coldest level for storing beverages, fruits and vegetables may freeze. If this occurs, adjust the temperature to a slightly warmer setting.

Maintenance

Overall Cleaning

- Dust behind the refrigerator and on the floor must be cleaned to improve the cooling effect and energy saving.
- Check the door gasket regularly to make sure there is no debris. Clean the door gasket with a soft cloth dampened with soapy water or diluted detergent.
- The interior of the refrigerator should be cleaned regularly to avoid odors.
- Turn off the power before cleaning the interior.
- Remove all food, beverages, shelves, drawers, and other items from the refrigerator.
- Use a soft cloth or sponge to clean the inside of the refrigerator with two tablespoons of baking soda and a quart of warm water. Then rinse with water and wipe clean. After cleaning, open the door and let it air dry before turning on the power.
- For hard-to-reach areas inside the refrigerator—such as narrow spaces, gaps, or corners—clean regularly using a soft cloth or soft brush. When necessary, use a thin tool (such as a small stick wrapped in a cloth) to ensure no dirt or bacteria accumulate in these areas.
- Do not use harsh chemicals such as concentrated detergent, scrub powder, or spray cleaners inside the refrigerator, as they may leave odors or contaminate food.
- Clean the door trays, shelves, and drawers with a soft cloth dampened with mild soapy water or a diluted neutral detergent. Dry with a soft cloth or allow to air-dry.
- Wipe the exterior surfaces with a soft cloth and mild soapy water or a neutral detergent, then dry thoroughly.
- Do not use hard brushes, scouring pads, steel wool, abrasive cleaners (such as toothpaste), or organic solvents (including alcohol, acetone, or paint thinners). These may damage the interior or exterior surfaces. Boiling water and strong solvents can deform or damage plastic components.
- Do not rinse the refrigerator directly with water or other liquids. Excess moisture can cause electrical short circuits or damage the unit's insulation.

 **Unplug the refrigerator for defrosting and cleaning.**

Defrosting

- Frost that forms due to seasonal or temperature changes can be removed manually. Disconnect the appliance from the power supply and allow the frost to melt, or wipe it away gently with a dry cloth.

Out Of Operation

Power Failure

- During a power outage, food can generally remain safe for several hours, even in warm weather.
- Keep the doors closed as much as possible to maintain the internal temperature.
- Do not add fresh food to the appliance during a power failure.

Long-Term Non-Use

- Unplug the appliance, clean it thoroughly, and leave the doors slightly open to prevent odors and mold.

Moving the Appliance

- Remove all items from the refrigerator and secure shelves, drawers, and glass parts with tape.
- Tighten the leveling feet, close the doors, and tape them shut before moving.
- Do not lay the appliance on its side or upside down, and avoid excessive vibration. The appliance should not be tilted more than 45° during transport.

IMPORTANT:

- Once the appliance is turned on, it should operate continuously. Frequent or prolonged interruptions may reduce its service life.

Troubleshooting

The following common issues can typically be resolved by the user. If the problem persists after troubleshooting, please contact KoolMore Customer Service.

Malfunction	• Confirm the appliance is properly plugged in. • Check whether the voltage is too low. • Ensure there is no power outage and the circuit breaker has not tripped.
Odor	• Wrap odorous foods tightly. • Check for spoiled or rotten food. • Clean the inside of the refrigerator.
Compressor Runs for a Long Time	• Extended run time is normal in summer or when the ambient temperature is high. • Avoid placing too much food in the appliance at once. • Do not place hot food inside; allow it to cool first. • Reduce the frequency of door openings.
Light Fails to Turn On	• Check whether the refrigerator is connected to power and whether the light switch area is obstructed. • The LED light may be damaged; replacement must be performed by a qualified technician.
Door Cannot Close Properly	• Food packages may be blocking the door. • The refrigerator may be tilted—re-level the unit.
Loud Noises	• Ensure the refrigerator is level and placed on a stable surface. • Verify that accessories and internal components are properly positioned.
Door Seal Is Not Tight	• Remove any debris or foreign matter from the door gasket. • Warm the gasket with a hair dryer or warm towel, then allow it to cool so it can reshape and seal properly.
Water Pan Overflows	• Excessive food or high-moisture items may cause heavy frost buildup, resulting in increased defrost water. • Doors may not be closing properly, allowing moist air to enter the refrigerator.
Hot Housing	• Heat from the built-in condenser may warm the exterior housing; this is normal. • High ambient temperatures, excessive food storage, or compressor shutdown may increase surface heat. • Ensure good ventilation around the unit for proper heat dissipation.
Surface Condensation	• Condensation on the exterior or door seals is normal when humidity is high. Wipe dry with a clean towel.
Abnormal Noise	• Buzz: The compressor may buzz during operation, especially at startup or shutdown—this is normal. • Creak: The flow of refrigerant can produce a creaking sound—this is also normal.

Appendix

How to Store For Best Preservation (applicable models only)

Cover food to retain moisture and prevent it from picking up odors from other food. A large pot of food, like soup or stew, should be divided into small portions and put in shallow containers before being refrigerated. A large cut of meat or whole poultry should be divided into smaller pieces or placed in shallow containers before being refrigerated.

Placement of Foods

Shelves	Shelves are adjustable to accommodate a variety of packages.
Specialized compartment (applicable models only)	- Sealed crisper drawers provide an optimal storage environment for fruit and vegetables. Vegetables require higher humidity while fruit requires lower humidity. - Crispers are equipped with control devices to control the humidity level (*depending on model and options). - An adjustable temperature meat drawer maximizes the storage time of meat and cheese.
Storage in the door	Do not store perishable food in the door. Eggs should be stored in the carton on a shelf. The temperature of the storage bins in the door fluctuates more than the temperature inside the cabinet. Keep the door closed as much as possible.
Freezer compartment	You can store frozen food and freeze fresh food in the freezer compartment.

 **Note: Freeze fresh, undamaged food only. Keep food which is to be frozen away from food which is already frozen. To prevent food from losing its flavor or drying out, place in airtight containers.**

Refrigerator & Freezer Storage Chart

Storage life varies based on temperature, packaging, and exposure to moisture. Because date labels are not always a reliable indicator of food safety, use this chart as a general guide and follow proper storage practices.
