

RU2431 User Manual

1. Installation and Connection

1.1 Equipment Shape and Interface

The overall appearance of the RRU is shown in Figure 1-1.

Figure 1-1 Overall Appearance

Front Panel is shown in Figure 1-2.

Figure 1-2 Front Panel

No.	Interface Name	Description
1	CH1	LTE RF output port 1
2	CH2	LTE RF output port 2
3	OPS	Optical Port_Slave
4	OPM	Optical Port_Master
5	DEBUG	Ethernet Debug Port

6	GE	Alarm Output Port
7	PWR	Power Connector
8	OPS	OPS Indicator
9	OPM	OPM Indicator
10	RUN	System Running Indicator

1.2 Installation Preparation

Before starting to install the RRU, the following conditions must be confirmed:

A computer with a 10/100/1000Base-TX adaptive fast Ethernet card and a network cable.

The IP address of the computer's Ethernet card is in the same network segment as the device configuration.

It is recommended to use a browser of Microsoft IE 6.0 or above.

1.3 Device Connection

The working connection of the RRU is shown in the Figure 1-3 below.

Figure 1-3 Device Connection Diagram

 Place the GPS near a window with a clear view of the sky for better satellite identification.

1.4 Installation Rules

When installing the RRU, the following principles and precautions must be observed:

- The installation location of the equipment should meet the engineering design requirements.
- Install the equipment vertically on the wall to ensure the convenience and aesthetics of the installation. The unused outlet holes should be protected with corresponding plugs.

- Install the equipment in a place that is well ventilated, dry, and conducive to heat dissipation. Do not place it in or near a place with a heat source.
- Install the equipment in a place where there is no direct sunlight or less direct sunlight, such as a shaded place. Do not place at the smoke outlet pipe, or in a place where water passes through, such as a water pipe.
- Keep away from pollution sources and install the equipment at least 1km away from chemical plants and seaside salt lakes.
- The strength of the equipment installation should be able to withstand an earthquake of magnitude 8.

1.5 RRU Installation

1.5.1 Installation Accessories

The installation accessories are shown in Table 1-1. Users can use a combination of different accessories according to the installation scenario.

① Nut M10		② Screw M6×14		③ Flat Washer M10		④ Spring Washer M10	
							
⑤ Handle				⑥ Expansion Bolt M10×90			
							
⑦ Optical Transceiver FTLX2071D327 Optical Transceiver FTLX2071D333		⑧ HPRU Mounting Bracket I		⑨ HPRU Mounting Bracket II			
							
⑩ AC Power Lead 2.5m							
							
⑪ Ground Wire 2m							
							

Table 1-1 List of Accessories

1.5.2 Installation Space

1.5.3 Wall Mounting (Back Against the Wall)

1. Attach the [5] Handle to the side of the device with [2] M6*14 Screws using the T5 wrench.

2. Fix the [8] Mounting Bracket I on the back of the device with [2] M6*14 Screws using the T5 wrench.

3. Put the [9] Mounting Bracket II on the wall and mark the position of the drilled holes.
Note: R=13mm.

4. Drill 4 holes at the marked positions. Note: H=70mm

5. Use the hammer drill to fix the [6] Expansion Bolts to the wall.
Note: If you need to install multiple devices at the same time, you can use [9] Mounting Bracket II as a reference to control the distance of each device.

6. Hang the device vertically on the [9] Mounting Bracket II and fix it with [1] M10 Nuts, [3] M10 Flat Washers, and [4] M10 Spring Washers.

7. Connect the [8] Mounting Bracket I to [9] Mounting Bracket II by using [2] M6*14 Screws.

8. Connect and tighten the [10]Power Lead and [11] Ground Wire on the the device.

1.5.4 Wall Mounting (Side Mounting)

1. Attach the [5] Handle to the side of the device with [2] M6*14 Screws using the T5

wrench.

2. Fix the [8] Mounting Bracket I on the left of the device with [2] M6*14 Screws using the T5 wrench.

3. Put the [9] Mounting Bracket II on the wall and mark the position of the drilled holes.

Note: R=13mm.

4. Drill 4 holes at the marked positions. Note: H=70mm

5. Use the hammer drill to fix the [6] Expansion Bolts to the wall.

Note: If you need to install multiple devices at the same time, you can use [9] Mounting Bracket II as a reference to control the distance of each device.

6. Hang the device vertically on the [9] Mounting Bracket II and fix it with [1] M10 Nuts, [3] M10 Flat Washers, and [4] M10 Spring Washers.

7. Connect the [8] Mounting Bracket I to [9] Mounting Bracket II by using [2] M6*14 Screws.

8. Connect and tighten the [10] Power Lead and [11] Ground Wire on the the device.

1.5.5 Pole Installation

2. RRU Network Configuration

2.1 Setting Up the Client Computer

Before logging in to the Web client, you must first set the IP address in the client computer to ensure that the client computer is connected to the RRU. Take Windows 10 as an example.

1. Click "Start > Control Panel" and click "Network and Internet" in the pop-up window.
2. Click "View network status and tasks" and click "Local Area Connection" in the pop-up window.
3. In the pop-up "Local Area Connection Status" dialog box, click "Properties", and then you will see the "Local Area Connection Properties" window.
4. Select "Internet Protocol Version 4 (TCP/IPv4)" and then click "Properties", you will see a pop-up window as shown in Figure 2-1.
5. Check "Use the following IP address" and enter the IP address, Subnet mask and default gateway, and click "OK".

IP address: 10.7.3.xxx (Recommended value is 100~199);

Subnet mask: 255.0.0.0;

Default gateway: Optional.

General

You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.

☐ Obtain an IP address automatically

☒ Use the following IP address:

IP address: 10 . 7 . 3 . 160

Subnet mask: 255 . 0 . 0 . 0

Default gateway: . . .

☐ Obtain DNS server address automatically

☒ Use the following DNS server addresses:

Preferred DNS server: . . .

Alternate DNS server: . . .

☐ Validate settings upon exit

Advanced...

OK Cancel

Figure 2-1 Setting Client IP Address

6. Perform ping 10.7.3.200 in a command line window to check the network connectivity between the client computer and the RRU.

2.2 Login Web Maintenance Page

Enter https://10.7.3.200 in the browser address bar to open the web client login page. 10.7.3.200 is the initial IP address of the WAN interface. Enter your username, password to login. The username and password are “admin”.

Please take attention that changes or modification not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation. This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 770cm between the radiator & your body.
