

Operating Instructions

Normal Sounds

NOTE

All the pictures in this manual are for illustrative purposes only. The actual shape of the air conditioner you purchased may be slightly different, but its operations and functions are similar.

Air Conditioner Operation

WARNING

To reduce the risk of fire, electrical shock, or injury to people or property, read the SAFETY PRECAUTIONS before operating this appliance.

NOTE

The cool circuit has an automatic 3 minutes time delayed start if the unit is turned off and on quickly. This prevents overheating of the compressor and possible circuit breaker tripping

To quickly begin operating the air conditioner, follow these steps:

1. Set the thermostat to the lowest number (coldest setting).
2. Set the selector control to the highest COOL setting.
3. Adjust the louver for comfortable air flow (see Air Directional Louvers).
4. Once the room feels colder, adjust the thermostat to the setting you find most comfortable.
5. Make sure that the air flow inside and outside are not obstructed by anything.
6. This air conditioner is designed to be operated under conditions as follows:

Cooling Operation

- Outdoor temp.: 18-43°C (64°F ~ 109°F)
- Indoor temp.: 17-32°C (62°F ~ 90°F)

NOTES

- The relative humidity of room should be less than 80%. If the unit is used in a condition with a relative humidity over 80%, there will be condensed water on the surface of the unit.
- Performance may be reduced outside of these operating temperatures.

Before you begin, thoroughly familiarize yourself with the control panel as shown below and all its functions, then follow the symbol for the functions you desire. The unit can be controlled by the unit control panel alone or with the remote controller.

Key Pad Features

(ON/OFF) Button

The unit will initiate automatically the Energy saver function under Cool, Dry, Auto (only Auto-Cooling and Auto-Fan) modes.

NOTE

If the unit turns off unexpectedly due to a power outage, it will restart with its previously set functions when the power resumes.

(UP/DOWN) Button

Press or hold either left (-) or right (+) button until the desired temperature is seen on the display. This temperature will be automatically maintained at the set temperature, between 62°F (17°C) and 86°F (30°C). If you want the display to read the actual room temperature, see "To Operate on Fan Only" section.

(MODE) Button

- To choose operating mode, press Mode button. Each time you press the button, a mode is selected in a sequence that goes from Auto, Cool, Dry and Fan. The indicator light beside will be illuminated and remains on once the mode is selected.
- The unit will initiate automatically the Energy Saver function under Cool, Dry, Auto (only Auto-Cooling and AutoFan) modes.

Operating on AUTO mode:

- When you set the air conditioner in AUTO mode, it will automatically select cooling, heating (selected models only) or fan only operation depending on what temperature you have selected and the room temperature.
- The air conditioner will control room temperature automatically to hit the temperature set point you choose.
- In this mode, the fan speed cannot be adjusted, it starts automatically at a speed according to the room temperature.

Operating on FAN mode:

- Use this function only when cooling is not desired, such as for room air circulation or to exhaust stale air (on some models). (Remember to open the vent during this function, but keep it closed during cooling for maximum cooling efficiency.) You can choose any fan speed you prefer.
- During this function, the display will show the actual room temperature, not the set temperature as in the cooling mode.

- In Fan only mode, the temperature can not be adjusted.

Operating on DRY mode:

- In this mode, the air conditioner will operate in the form of a dehumidifier. Since the conditioned space is a closed or sealed area, some degree of cooling will continue.

(FAN SPEED) Button

- Used to select the Fan Speed in four steps - Auto, Low, Med or High. Each time the button is pressed, the fan speed mode is shifted. On Dry mode, the fan speed is controlled at low automatically.

(ENERGY SAVER) Button

This function is available on COOL, DRY, AUTO (only AUTO-COOL and AUTO-FAN) modes. The fan will continue to run for 3 minutes after the compressor shuts off.

The fan then cycles on for 2 minutes at 10 minute intervals until the room temperature is above the set temperature, at which time the compressor turns back on and Cooling Starts.

(SLEEP) Button

In this mode the selected temperature will increase by 2°F/1°C 30 minutes after the mode is selected. The temperature will then increase by another 2°F/1°C after an additional 30 minutes.

This new temperature will be maintained for 6 hours before it returns to the originally selected temperature.

This ends the Sleep mode and the unit will continue to operate as originally programmed. The Sleep mode program can be cancelled at any time during operation by again pressing the Sleep button.

(TIMER) Button

- When the unit is on or off, first press Timer button, the TIMER ON indicator light illuminates. It indicates the Auto Start program is initiated.
- When the time of TIMER ON is displayed, press the Timer button again, the TIMER OFF indicator light illuminates. It indicates the Auto Stop program is initiated.
- Press or hold either left (-) or right (+) button to change the Auto time by 0.5 hour increments, up to 10 hours, then at 1 hour increments up to 24 hours.
- The control will count down the time remaining until start.
- The selected time will register in 5 seconds, and the system will automatically revert back to display the previous temperature setting or room temperature when the unit is on. (when the unit is off, there is no display.)
- Turning the unit ON or OFF at any time or adjusting the timer setting to 0.0 will cancel the Auto Start/Stop timed program.

(CHECK FILTER) Button

This feature is a reminder to clean the Air Filter for more efficient operation. The LED (light) will illuminate after 250 hours of operation. To reset after cleaning the filter, press the Check Filter button and the light will go off.

LED Display:

Shows the set temperature in "°C" or "°F" and the Autotimer settings. While on Fan only mode, it shows the room temperature.

Error codes:

AS - Room temperature sensor error - Unplug the unit and plug it back in. If error repeats, call for service. NOTE: In Fan only mode, it will display "LO" or "HI".

- - Evaporator temperature sensor error - Unplug the unit and plug it back in. If error repeats, call for service. NOTE: "•" is displayed as shown in the left picture.

HS - Electric heating sensor error - Unplug the unit and plug it back in. If error repeats, call for service.

Additional Information

Now that you have mastered the operating procedure, here are more features in your control that you should become familiar with.

- The Cool circuit has an automatic 3 minute time delayed start if the unit is turned off and on quickly. This prevents overheating of the compressor and possible circuit breaker tripping.
- The fan will continue to run during this time.
- The control will maintain any set temperature within 1°F/1°C, between 62°F (17°C) and 86°F (30°C).

- The control can display temperature in Fahrenheit or Celsius.
- To convert from one to the other, press and hold the left (-) or right (+) Temp/Timer buttons at the same time, for 3 seconds.

Fresh Air Vent Control (for 10000 BTU/h and 12000 BTU/h)

Fig. A (VENT CLOSED)

Fig. B (VENT OPEN)

Fig. C (VENT & EXHAUST OPEN)

The Fresh Air Vent allows the air conditioner to:

1. Recirculate inside air – Vent Closed (See Fig. A)
2. Draw fresh air into the room - Vent Open (See Fig. B)
3. Exchange air from the room and draws fresh air into the room - Vent and Exhaust Open (See Fig. C).

Air Directional Louvers

The louvers will allow you to direct the air flow up or down and left or right throughout the room as needed. Pivot horizontal louvers until the desired up/down direction is obtained.

Move the levers from side to side until the desired Air direction left/right direction is obtained.

Care and Cleaning

CAUTION Clean your air conditioner occasionally to keep it looking new. Be sure to unplug the unit before cleaning to prevent shock or fire hazards.

Air Filter Cleaning

The air filter should be checked at least once a month to see if cleaning is necessary. Trapped particles in the filter can build up and cause an accumulation of frost on the cooling coils.

- Push the vent handle to the closed position (where applicable).
- Open the front panel.
- Grasp the filter by the center and pull up and out.
- Wash the filter using liquid dishwashing detergent and warm water. Rinse filter thoroughly.
- Gently shake excess water from the filter. Be sure the filter is thoroughly dry before replacing.
- Or, instead of washing you may vacuum the filter clean.

NOTE Never use hot water over 40°C (104°F) to clean the air filter. Never attempt to operate the unit without the air filter.

Cabinet Cleaning

- Be sure to unplug the air conditioner to prevent shock or fire hazard. The cabinet and front may be dusted with an oil-free cloth or washed with a cloth dampened in a solution of warm water and mild liquid dishwashing detergent. Rinse thoroughly and wipe dry.
- Never use harsh cleaners, wax or polish on the cabinet front.
- Be sure to wring excess water from the cloth before wiping around the controls. Excess water in or around the controls may cause damage to the air conditioner.
- Plug in air conditioner.

Winter Storage

If you plan to store the air conditioner during the winter, remove it carefully from the window according to the installation instructions. Cover it with plastic or return it to the original carton

Troubleshooting Tips

Before calling for service, review this list. It may save you time and expense. This list includes common occurrences that are not the result of defective workmanship or materials in this appliance.

Problem	Solution
Air conditioner does not start	Wall plug disconnected. Push plug firmly into wall outlet.
	House fuse blown or circuit breaker tripped. Replace fuse with time delay type or reset circuit breaker.
	Plug current device tripped. Press the RESET button.
	Control is OFF. Turn control ON and set to desired setting.
	Unit turned off and then on quickly. Turn unit off and wait 3 minutes before restarting.
Air from unit does not feel cold enough	Room temperature below 17°C (62°F). Cooling may not occur until room temperature rises above 17°C (62°F).
	Temperature sensing element touching cold coil, located behind air filter. Straighten tube away from coil.
	Reset to a lower temperature.
	Compressor shut-off by changing modes. Wait approximately 3 minutes and listen for compressor to restart when set in the COOL mode.
Air conditioner cooling, but room is too warm- ice forming on cooling coil behind decorative front.	Outdoor temperature below 18°C (64°F). To defrost the coil, set FAN ONLY mode.
	Air filter may be dirty. Clean filter. Refer to Care and Cleaning section. To defrost, set to FAN ONLY mode.
	Thermostat set too cold for night-time cooling. To defrost the coil, set to FAN ONLY mode. Then, set temperature to a higher setting.

Air conditioner cooling, but room is too warm- NO ice forming on cooling coil behind decorative front	<p>Air filter may be dirty. Clean filter. Refer to Care and Cleaning section. To defrost, set to FAN ONLY mode.</p>
	<p>Temperature is set too High, set temperature to a lower setting.</p>
	<p>Air directional louvers positioned improperly. Position louvers for better air distribution.</p>
	<p>Front of units is blocked by drapes, blinds, furniture, etc. - restricts air distribution. Clear blockage in front of unit.</p>
	<p>Doors, windows, registers, etc. Open- cold air escapes. Close doors, windows, registers.</p>
	<p>Unit recently turned on in hot room. Allow additional time to remove “stored heat” from walls, ceiling, floor and furniture.</p>
Air conditioner turns on and off rapidly	<p>Dirty air filter- air restricted. Clean air filter.</p>
	<p>Outside temperature extremely hot. Set FAN speed to a higher setting to bring air past cooling coils more frequently.</p>
Noise when unit is cooling	<p>Air movement sound. This is normal . If too loud, set to a slower FAN setting.</p>
	<p>Window vibration - poor installation. Refer to installation instructions or check with installer.</p>
Water dripping INSIDE when unit is cooling	<p>Improper installation. Tilt air conditioner slightly to the outside to allow water drainage.</p> <p>Refer to installation instructions - check with installer.”</p>
Water dripping OUTSIDE when unit is cooling	<p>Unit removing large quantity of moisture from humid room. This is normal during excessively humid days.</p>

Remote sensing deactivating prematurely (some models)	Remote control not located within range. Place remote control within 20 feet & 180°, radius of the front of the unit.
	Remote control signal obstructed. Remove obstruction.
Room too cold	Set temperature too low. Increase set temperature.

Remote Control Operating Instructions

Using The Remote Control

Location of the remote controller

Use the remote controller within a distance of 8 meters / 26 feet from the appliance, pointing it towards the receiver. Reception is confirmed by a beep.

CAUTION

- The air conditioner will not operate if curtains, doors or other materials block the signals from the remote controller to the indoor unit.
- Prevent any liquid from falling into the remote controller. Do not expose the remote controller to direct sunlight or heat.
- If the infrared signal receiver on the indoor unit is exposed to direct sunlight, the air conditioner may not function properly. Use curtains to prevent the sunlight from falling on the receiver.
- If other electrical appliances react to the remote controller, either move these appliances or call customer support.

Electronic display displays the following information:

- A: Remote control power On/OFF and mode icons
- B: Clock and Auto-Timer settings
- C: Current set temperature
- D: Fan speed setting control buttons

1. Power switch

NOTE The unit will automatically launch the Energy Saver function when it is in Cool, Dry and Auto modes.

2. Mode

3. Fan speed

4. Energy Saver - default setting which allows the fan to cycle on and off (instead of running continuously) when the compressor is not in use

5. Auto-Timer

6. Used to increase or decrease temperature settings in 1° increments on the Celsius or Fahrenheit scale.

7. Cancels current Timer ON/OFF settings.

8. Lock prevents the remote control settings from inadvertently being changed.

9. Clock: Press button for 3 seconds in order to set the clock. Press the up or down arrow to adjust the time in 10 minute intervals.

10. Used to activate the SLEEP program.

11. Toggle the LED backlight on/off.
12. Restore remote control default settings.

NOTE

The clock feature is only available on the remote, the unit does not have a clock. The remote clock is a 24 hour clock only

Changing The Batteries On The Remote

To operate the hand-held remote control will require two “AAA” alkaline batteries (included). Batteries should be replaced when:

- a. No signal (beep) is heard when attempting to program the main unit.

- b. The main unit does not respond to a command issue by the remote control.

Battery replacement:

- Slide the rear cover on the remote in the directions of the arrow. Continue pulling (gently) until the cover separates completely from the unit.
- Insert (2) batteries (AAA) following the same orientation (polarity) depicted inside the battery chamber (+/-).
- Re-install the rear cover.
- If the remote control will not be used for extended periods of time (vacations, etc.), batteries should be removed.
- Protect the remote control from high temperatures, and keep away from radiation exposure.
- Keep the control panel receiver out of direct sunlight.
- Do not mix old and new batteries.
- Do not mix alkaline, standard (carbon-zinc), or rechargeable (Ni-cad, Ni-Mh, etc.) batteries.

- The remote operates within a range of 8 meters (26 ft.) from the receiver located inside the main unit. Any obstruction between the receiver and the remote may cause signal interference, limiting the ability to program the main unit.

NOTE

This equipment has been tested and found to comply with the limits for Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

1. Reorient or relocate the receiving antenna.
2. Increase the separation between the equipment and receiver.
3. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
4. Consult the dealer or an experience radio/TV technician for help.

Changes or modifications not approved by the party responsible for FCC compliance could void the user's authority to operate the equipment.

This appliance complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation
