

Operating Instructions

About the controls on the dehumidifier.

Controls

1. Power Pad

Press to turn the dehumidifier on and off.

2. Continuous

Select for the dehumidifier to operate continuously at its maximum dehumidification settings until the bucket is full. The Humidity Set Control Pads cannot be used when Continuous is on.

3. Humidity Set Control Pads

The humidity level can be set within a range of 35% RH (Relative Humidity) to 80% RH (Relative Humidity) in 5% increments.

For drier air, press the ▼ pad and set to a lower percent value (%).

For damper air, press the ▲ pad and set to a higher percent value (%).

When you first use the dehumidifier, set the humidity control to 45% or 50%. Allow at least 24 hours for the dehumidifier to achieve the humidity level. If you still have damper air than desired, set the humidity level to a lower setting or select Continuous for maximum dehumidification.

4. Fan Speed Pads

Control the fan speed.

Press to select either High or Normal fan speed.

Set the fan control to High for maximum moisture removal. When the humidity has been reduced and quiet operation is preferred, set the fan control to Normal.

5. Display

Shows the set % humidity level while setting, then shows the actual (+/- 5% accuracy) room % humidity level.

Error Codes

E1 – Humidity sensor error – Unplug the unit and plug it back in.

E2 – Temperature sensor error – Unplug the unit and plug it back in.

P1 – Unit is defrosting – Allow the unit time to automatically defrost. The error will clear after the unit self defrosts.

P2 – Water bucket is full – Empty the water bucket and replace. See the Removing Collected Water section.

Other Features

BUCKET FULL Light

Glowes when the bucket is ready to be emptied, or when the bucket is removed or not replaced in the proper position.

Auto Shut Off

The Water Level Control Switch shuts off the dehumidifier when the bucket is full, or when the bucket is removed or not replaced in the proper position.

Auto Defrost

When frost builds up on the evaporator coils, the compressor will cycle off and the fan will continue to run until the frost disappears.

Power Outage

In the case of a power outage or interruption, the unit will automatically re-start, in the settings last used, after the power is restored.

Using the dehumidifier.

When first using the dehumidifier, operate the unit continuously 24 hours.

How the Dehumidifier Operates

Moist, humid air is drawn over a cold refrigerated dehumidifying coil. Moisture in the air condenses on this coil and drains into a bucket (or through a hose and drain).

Dry, clean air is drawn through the condenser where it is heated and discharged out the front grille into the room.

It is normal for the surrounding air to become slightly warmer as the dehumidifier operates.

This warming effect further reduces the relative humidity of the surrounding air.

Automatic Defrost

When frost builds up on the evaporator coils, the compressor will cycle off and the fan will continue to run until the frost disappears.

When the coil is defrosted, the compressor or fan (depending on model) will automatically restart and dehumidifying will resume.

Choosing a Location

A dehumidifier operating in a basement will have little or no effect in drying an adjacent enclosed storage area, such as a closet, unless there is adequate circulation of air in and out of the area.

- Do not use outdoors.
- This dehumidifier is intended for indoor residential applications only. This dehumidifier should not be used for commercial or industrial applications.
- Place the dehumidifier on a smooth, level floor strong enough to support the unit with a full bucket of water.
- Allow at least 12–18 inches of air space on all sides of the unit for good air circulation.
- Place the dehumidifier in an area where the temperature will not fall below 41°F (5°C). The coils can become covered with frost at temperatures below 41°F, which may reduce performance.
- Use the dehumidifier in cooking, laundry, bathing and dishwashing areas that have excessive moisture.
NOTE: Place the dehumidifier away from the clothes dryer.
- Use the dehumidifier to prevent moisture damage anywhere books or valuables are stored.
- Use the dehumidifier in a basement to help prevent moisture damage.
- The dehumidifier must be operated in an enclosed area to be most effective.
- Close all doors, windows and other outside openings to the room.

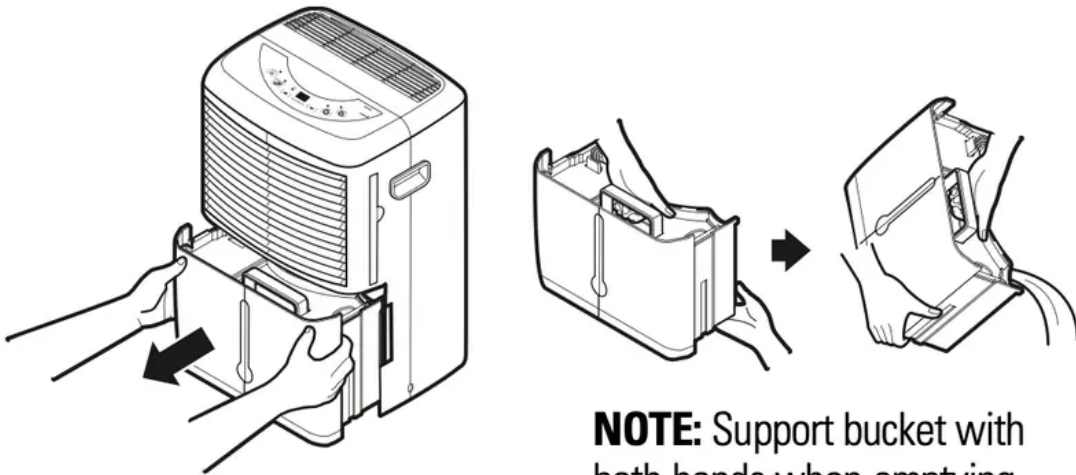

NOTE: The dehumidifier has rollers to aid placement, but it should only be rolled on smooth, flat surfaces. Do not attempt to roll the dehumidifier on carpet or over objects.

Removing Collected Water

There are 2 ways to remove collected water:

1. **Use the bucket.** When the bucket is removed, the unit will shut off. Empty and replace the bucket.

IMPORTANT: Do not use the drain tube if using the bucket to collect water. When the drain tube is connected, water will flow through it onto the floor instead of into the bucket.

NOTES:

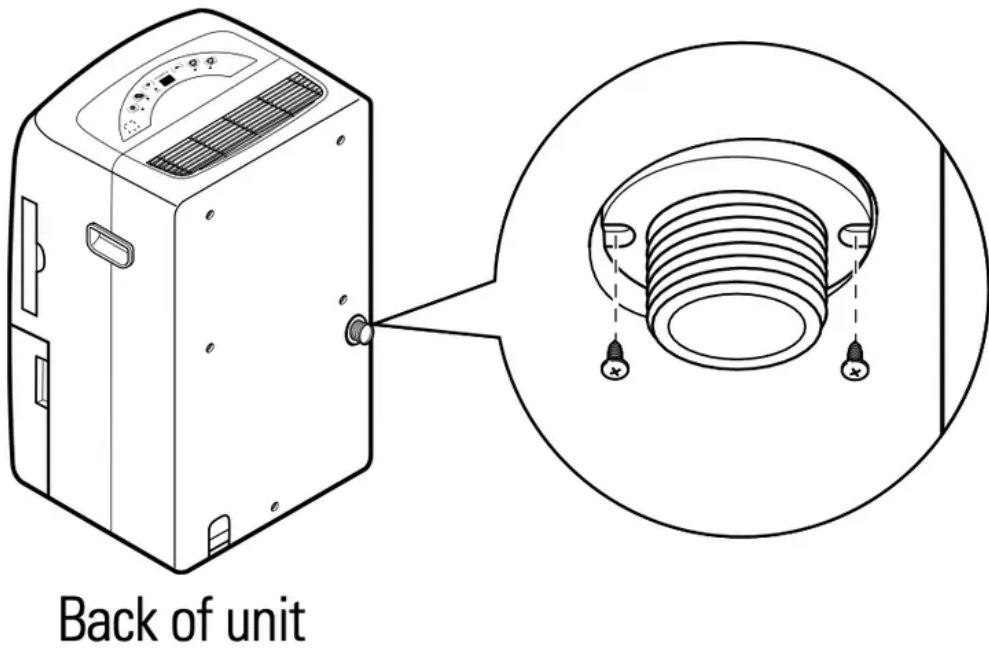

Do not remove the bucket while the dehumidifier is operating or if it has just stopped operating. This might cause some water to drip from the drain pan.

The bucket must be in place and securely seated for the dehumidifier to operate.

2. **Use a hose.** Water can be automatically emptied into a floor drain by attaching the unit's drain tube with nozzle and a garden water hose (not included).
 1. Remove the bucket from the front of the unit.
 2. Remove the plug cover from the back of the unit and store it in a safe location.
 3. Insert the tube through the hole in the back of the unit and securely press it onto the connector on the front of the unit. Push the tube around the front connector until the nozzle is flush with the back of the unit.

4. Secure the nozzle to the back of the unit with the two screws provided.

5. Cut (as needed) and thread a garden hose (not supplied) onto the nozzle and lead it to the floor drain.

6. Replace the bucket in the unit.

NOTE: The bucket must be in place and securely seated for the dehumidifier to operate.

Water Level

The dehumidifier will turn off automatically when the bucket is full, or when the bucket is removed or not replaced in the proper position.

The bucket must be replaced in the proper position for the dehumidifier to work. The light will be on and the dehumidifier will not run if the bucket is not in the proper position.

Care and Cleaning

Turn the dehumidifier off and remove the plug from the wall outlet before cleaning.

Grille and Case

To clean the case:

Use water and a mild detergent. Do not use bleach or abrasives.

If cabinet paint chips, you can touch it up with a good grade enamel paint to prevent rust.

To clean the front grille:

Use a vacuum attachment or brush.

Water Bucket

To clean:

Every few weeks, clean the bucket to prevent growth of mold, mildew and bacteria. Partially fill the bucket with clean water and add a little mild detergent. Swish it around in the bucket, empty and rinse.

NOTE: Do not use a dishwasher to clean the water bucket.

To remove:

Remove the bucket and pour any water out.

To replace:

Slide the bucket into the dehumidifier.

NOTE: The bucket must be in place and securely seated for the dehumidifier to operate.

Air Filter

The air filter behind the front grille should be checked and cleaned at least every 30 days or more often if necessary.

NOTE: DO NOT rinse or put the filter in an automatic dishwasher.

To remove:

Grasp the filter edge and pull it out the side.

Clean the filter with warm, soapy water. Rinse and let the filter dry before replacing it. Do not clean the filter in a dishwasher.

CAUTION: DO NOT operate the dehumidifier without a filter because dirt and lint will clog it and reduce performance.

NOTE: Avoid using a dishwasher to clean the filter.

Troubleshooting

Problem	Possible Causes	What To Do
Dehumidifier does not start	The dehumidifier is unplugged.	<ul style="list-style-type: none"> • Make sure the dehumidifier's plug is pushed completely into the outlet.
	The fuse is blown/circuit breaker is tripped.	<ul style="list-style-type: none"> • Check the house fuse/circuit breaker box and replace the fuse or reset the breaker.
	Dehumidifier has reached its preset level or bucket is full.	<ul style="list-style-type: none"> • The dehumidifier automatically turns off when this occurs. Empty the bucket and replace properly.
	Bucket is not in the proper position.	<ul style="list-style-type: none"> • The bucket must be in place and securely seated for the dehumidifier to operate.
	Power failure.	<ul style="list-style-type: none"> • There is a protective time delay (up to 3 minutes) to prevent tripping of the compressor overload. For this reason, the unit may not start normal dehumidifying for 3 minutes after it is turned back on.
Dehumidifier does not dry the air as it should	Did not allow enough time to remove the moisture.	<ul style="list-style-type: none"> • When first installed, allow at least 24 hours to maintain the desired dryness.
	Airflow is restricted.	<ul style="list-style-type: none"> • Make sure there are no curtains, blinds or furniture blocking the front or back of the dehumidifier. See the Choosing a Location section.

Problem	Possible Causes	What To Do
	The Humidity Control may not be set low enough.	<ul style="list-style-type: none"> For drier air, press the ▼ pad and set to a lower percent value (%) or press the Continuous pad for maximum dehumidification.
	Doors and windows may not be closed tightly.	<ul style="list-style-type: none"> Check that all doors, windows and other openings are securely closed.
	Clothes dryer may be blowing moisture-laden air into the room.	<ul style="list-style-type: none"> Install the dehumidifier away from the dryer. The dryer should be vented to the outside.
	Room temperature is too low.	<ul style="list-style-type: none"> Moisture removal is best at higher room temperatures. Lower room temperatures will reduce the moisture removal rate. Models are designed to be operated at temperatures above 41°F (5°C).
Dehumidifier runs too much	Area to be dehumidified is too large.	<ul style="list-style-type: none"> Refer to the chart below to see if the capacity of your dehumidifier is adequate.
	Doors and windows are open.	<ul style="list-style-type: none"> Close all doors and windows to the outside.
Frost appears on the coils	Dehumidifier has been recently turned on, or room temperature is below 41°F (5°C).	<ul style="list-style-type: none"> This is normal. Frost will usually disappear within 60 minutes. See the Automatic Defrost section.

Problem	Possible Causes	What To Do
Fan cannot be turned off and the Normal or High fan speed pads cannot be set	The dehumidifier is in the automatic fan mode. When the set room humidity level is reached, the compressor will turn off and the fan will automatically continue to run for approximately 3 minutes at a fixed setting.	<ul style="list-style-type: none"> • This is normal. Wait approximately 3 minutes and set the fan to Normal or High as desired.
Fan noise	Air is moving through the dehumidifier.	<ul style="list-style-type: none"> • This is normal.
Water on floor	Tube to connector or nozzle or hose connection may be loose.	<ul style="list-style-type: none"> • Check the tube to connector and the nozzle to hose connections. See the Removing Collected Water section.
	Intend to use the bucket to collect water, but the drain nozzle is attached.	<ul style="list-style-type: none"> • Disconnect the drain nozzle if using the bucket to collect water. See the Removing Collected Water section.
E1, E2, P1 or P2 appear in the display	These are error codes.	<ul style="list-style-type: none"> • See the About the controls on the dehumidifier section.
