Use Guide

Before First Use

1. Remove all packaging materials and stickers from the toaster.
2. Wipe the exterior with a damp cloth and dry thoroughly. Do not immerse in water.
3. Operate the toaster without bread on the highest shade setting (6) for one cycle in a well-ventilated area. This will burn off any manufacturing residues and may produce a slight odor, which is normal.

Basic Toasting

1. Plug the toaster into a standard 120V electrical outlet.
2. Use the Shade Selector Dial to choose your desired browning level (1-6).
3. Place bread, bagels, or other toasting items into the wide slots. For best heat distribution, it is recommended to place food in both slots even if toasting only one slice.
4. Press the Carriage Lever down fully until it locks. The digital display will illuminate and begin the countdown.
5. The toasting cycle will complete automatically. The carriage will rise, and an audible signal may sound. The digital display will show "0".
6. If the toast is not dark enough, select a higher number and toast again for a shorter cycle.

Using Special Functions

Defrost Function

1. Place frozen bread, waffles, or bagels into the toaster slots.
2. Select your desired browning level with the Shade Selector Dial.
3. Press the **Defrost** button. The button may light up.
4. Press the Carriage Lever down to start the cycle. The toaster will automatically add extra time to the cycle to defrost and then toast the item.

Reheat Function

1. Place already-toasted bread into the toaster slots.
2. Press the **Reheat** button. The button may light up.
3. Press the Carriage Lever down. The toaster will warm the bread without significantly increasing its browning.

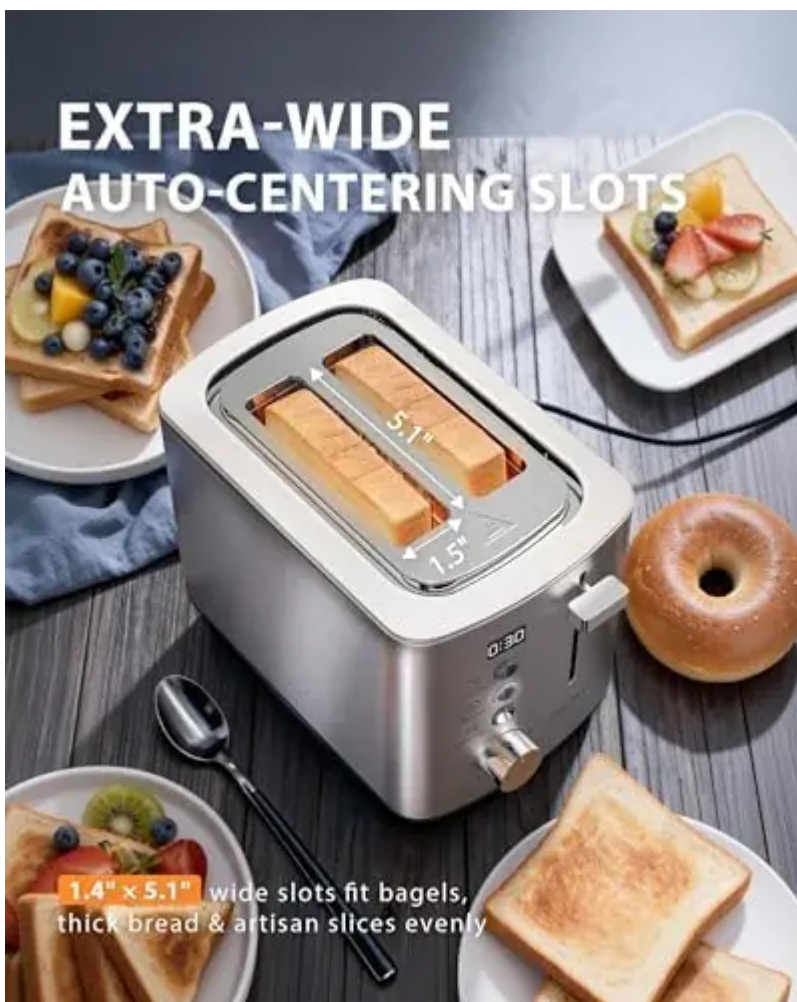

Cancel Function

To stop the toaster at any time during a cycle, press the **Cancel** button. The carriage will pop up immediately, and the heating elements will turn off.

Tips for Best Results

- For even toasting, use slices of relatively even thickness.
- Do not force foods that are too thick or large for the slots, as this may cause jamming.
- Buttered bread or bread with sugary toppings (like cinnamon sugar) should not be toasted, as they can melt, drip, and cause smoking or fire.
- Allow the toaster to cool completely between extended back-to-back toasting cycles.

Cleaning and Maintenance

1. **Unplug the toaster** and allow it to cool completely before cleaning.
2. **Exterior:** Wipe the outside of the toaster with a soft, damp cloth. Do not use abrasive cleaners or scouring pads.

3. Crumb Tray:

- Pull the crumb tray out from the bottom of the toaster.
- Empty crumbs into the trash.
- Wash the tray with warm, soapy water, rinse, and dry thoroughly.
- Slide the tray back into place until it clicks.

4. **Interior:** To remove lodged crumbs, turn the cooled, unplugged toaster upside down over a trash can and gently shake it. Do not insert any objects into the slots.
