Troubleshooting

1. Can't work?

- Please remove the battery's insulation sheet when you use the device for the first time. Under normal conditions, please check the battery status before using.

2. Couldn't be set?

- Naming the device and calibration should be operated within the range of the phone's Bluetooth.

3. How to know whether the device is connected to the network?

- View the Wi-Fi icon on the upper display of the device. If the icon is light, it says the device is online. The Wi-Fi connection status can also be displayed through the Wi-Fi icon in the device listing on the APP.

4. How to reconnect the device after being offline?

- Firstly, please check the device whether is on the working status. If the battery is no power, replace it in time.
- Then, click "APP—Your Device — Device's Setting" to reconfigure the WIFI.

5. Couldn't refresh data?

- The device uploads temperature and humidity data through Wi-Fi every 10min/30min, and there is a delay to obtain the data from the server.

6. Couldn't receive the notification?

- Check the device's settings and confirm Alarm me is turned on.
