

PARTS

This illustration shows the vacuum cleaner with all available features.

ONLY MIELE FILTERBAGS, FILTERS AND ACCESSORIES WITH THE “ORIGINAL MIELE” LOGO CAN BE USED WITH THIS VACUUM CLEANER. USE OF NONMIELE COMPONENTS MAY VOID THE WARRANTY.

Features marked * are model-specific and may vary or not be available on your vacuum cleaner.

1. Upper hook for power cord

2. Suction hose holder
3. Suction hose with handle
4. Release button
5. Telescopic wand
6. Dust compartment filter
7. Telescopic wand release button
8. Vacuum cleaner foot release
9. Exhaust filter *
10. Exhaust filter compartment
11. Powerbrush
12. Light *
13. FilterBag change indicator
14. Dust compartment release button
15. FilterBag
16. Control panel (see following page for description) *
17. Power cord
18. Powerbrush On/Off button ( / O)
19. On/Off button (I / O)
20. Handpiece

◦ **Back:**

21. Lower swivel hook for power cord
22. Upholstery nozzle
23. Carrying handle
24. Crevice nozzle
25. Dusting brush with natural bristles
26. Telescopic wand holder

Depending on the model, your vacuum will come standard with one of the following control panels:

HOW TO USE

Unwind the power cord

(Fig. 08)

The lower cable hook swivels.

- Turn it upwards to release the cable.

Winding up the power cord

(Fig. 09)

When the vacuum cleaner is not in use, the power cord can be wound around the two cord hooks.

Secure the power cord by clipping the plug to the cord (see detailed image).

Plugging in the vacuum cleaner

(Fig. 10)

- When vacuuming, loop the power cord through the guide notch on the side of the upper cord hook.

This will keep the power cord from getting in the way during vacuuming. It also protects the cable from becoming kinked at the handle.

Releasing the vacuum cleaner

(Fig. 11)

Press the foot release briefly and tilt the vacuum cleaner to a comfortable position for vacuuming.

Turning the vacuum on and off

(Fig. 12)

Please be sure to observe your flooring manufacturer's cleaning and care instructions.

- Press the I button on the handle.

The vacuum cleaner will turn on.

On models with a rotary selector dial: The vacuum cleaner in-operation indicator on the control panel will light up yellow.

On models with + / - buttons: The power settings on the control panel will light up yellow.

The light on the floorhead will come on to ensure adequate visibility of the vacuuming area.

Selecting the suction power

The suction power can be adjusted to suit the type of flooring being cleaned.

Reducing the power lowers the amount of effort required to maneuver the floor brush.

Rotary dial

(Fig. 13) (depending on model)

Turn the power selector manually to the desired power setting.

+/- buttons

(Fig. 14) (depending on model)

There are symbols on the control panel indicating what type of use the individual settings are suitable for.

	Curtains, lightweight fabric
	Upholstery, cushions
	Deep pile carpets, rugs and runners
	Energy-saving normal vacuuming. This setting is also very quiet.
	Low pile carpet and rugs
	Heavily soiled carpets and rugs

- Press the + button to select a higher power level.
- Press the - button to select a lower power level.

The selected setting will light up yellow.

Automatic power regulation

(Fig. 15) (on models with + / - buttons)

The power is automatically adjusted to suit the type of carpet being vacuumed.

- Press the Automatic button.

The button will light up yellow.

To deactivate the Automatic setting, press the Automatic button again.

Do not use the Automatic setting to vacuum lightweight materials or curtains. These could be sucked in and possibly damaged.

Obstacles

(Fig. 16)

Obstacles and variations in floor height, for instance when vacuuming over thresholds and the edges of rugs, are easy to maneuver.

- Briefly press the foot release and lift the front of the vacuum cleaner over the obstacle.

Vacuuming using the suction hose

To avoid the risk of injury, do not vacuum with the suction hose handle at head level.

Do not vacuum directly with the handle, i.e., without an accessory attached, as the rim could get damaged and you could hurt yourself on sharp edges.

When vacuuming stairs, be sure to place the vacuum cleaner on a lower step to prevent the risk of injury.

- Raise the vacuum cleaner into the vertical position.
- Press the release button on the telescopic wand to detach the suction hose handle (Fig. 17).
- For increased stability, turn the elbow joint at the bottom of the hose downwards as illustrated until it clicks into position above the retainer (Fig. 18).

During normal vacuuming, the suction hose handle should be securely connected to the telescopic wand.

Make sure the handle is also properly hooked into its holder on the vacuum cleaner (Fig. 17).

Vacuuming using the telescopic wand

To avoid the risk of injury, do not vacuum with the telescopic wand at head level.

When vacuuming stairs, be sure to place the vacuum cleaner on a lower step to prevent the risk of injury.

- Raise the vacuum cleaner into the vertical position.
- Lift the handle out of its holder to access the telescopic wand (Fig. 19).
- For increased stability, turn the elbow joint at the bottom of the hose downwards as illustrated until it clicks into position above the retainer (Fig. 18).

One part of the telescopic wand is fitted inside the other so that the tube can be adjusted to suit your preferred height for comfortable vacuuming.

Press the release button and adjust the tube to the desired height (Fig.

For normal vacuuming, the telescopic wands must be pushed back together and locked into position again.

Make sure the handle is also correctly hooked into its holder on the vacuum cleaner (Fig. 19).

Using the Powerbrush

Recommended use

Please be sure to observe your flooring manufacturer's cleaning and care instructions.

The Powerbrush is specially suited for the thorough vacuuming of carpets subject to heavy wear. It is very effective at removing deep-seated dirt and preventing frequently used areas from being trodden into a path.

Do not use the Powerbrush to vacuum high quality, hand knotted rugs, for example Berber or Persian rugs, as well as extremely long piled area rugs and carpets, e.g. shag.

There is a danger of the threads being pulled out. Turn the Powerbrush off to vacuum these types of floor coverings and use only low suction power.

Do not use the Powerbrush to clean highly variable or uneven floors. The sole plate may come into contact with the floor and cause damage.

Switching the Powerbrush on and off

(Fig. 21)

To use the Powerbrush, you will need to switch it on in addition to the vacuum cleaner using the

button on the handle.

The Powerbrush indicator light on the control panel will light up yellow.

This button also enables you to switch the Powerbrush off when vacuuming.

During vacuuming, the Powerbrush will switch off automatically whenever the vacuum cleaner is raised to its upright position.

How to use the Powerbrush

- To achieve the best results, pass the

Powerbrush slowly backwards and forwards over the carpet or floor.

For rugs with fringe, always draw the

Powerbrush from the middle of the rug across the fringe towards the floor to keep the fringe smooth.

Using the accessories supplied

(Fig. 22)

The following accessories are stowed at the back of the vacuum cleaner:

1. Upholstery nozzle

2. Crevice nozzle, 12" (300 mm)
 3. Dusting brush with natural bristles
- Attach the desired accessory to the suction hose handle or the telescopic wand.

MAINTENANCE

CAUTION Always switch off the vacuum cleaner for maintenance work and remove the plug from the outlet.

The Miele filtration system consists of three components:

- Original Miele FilterBag
- Motor protection filter
- Original Miele exhaust filter

These will need to be replaced from time to time to ensure that your vacuum cleaner performs efficiently

NOTE We recommend only using genuine FilterBags, filters, and accessories with the "Original Miele" logo on them. This will ensure that the suction power of the vacuum cleaner is maintained, giving the best possible cleaning results. FilterBags with the "Original Miele" logo on them are not made from paper or paper-based materials and nor do they have a cardboard collar. This is why our FilterBags are particularly long-lasting and reliable. Please note that appliance faults and damage originating from the use of accessories which do not carry the "Original Miele" logo will not be covered by the appliance guarantee.

Purchasing new FilterBags and filters

Original Miele FilterBags and filters are available from the Miele Webstore and your Miele dealer.

Ordering the correct FilterBags and filters

Only use original Miele U FilterBags with a green collar and original Miele filters. These can be identified by the "Original Miele" logo located on the packaging or directly on the FilterBag.

An AirClean filter and a dust compartment filter are supplied with every packet of Miele FilterBags.

These can also be purchased separately from your Miele Dealer, from

Miele or from the online shop. Please specify the model number of your vacuum cleaner when ordering to ensure that you receive the correct filter.

When to change the FilterBag

(Fig. 23)

Change the FilterBag when the color marker in the FilterBag change indicator turns red.

NOTE FilterBags are disposable and intended to be used only once. Dispose of the entire FilterBag. Do not attempt to re-use. Blocked pores reduce the efficiency of the vacuum cleaner.

Checking the FilterBag change indicator

- Raise the vacuum cleaner into the vertical position.
- Turn the vacuum cleaner on using the **I** button on the handle and set the power selector to the highest power setting.
- Tilt the vacuum cleaner until you can easily see the color marker in the FilterBag change indicator. The front of the Powerbrush will lift up as you do this.

If the marker completely fills the FilterBag change indicator, you should replace the bag with a new one.

How the FilterBag change indicator works

The FilterBag change indicator is set for normal household dust. This generally contains a mixture of dust, hair, threads, carpet lint, grit, etc.

However, if the cleaner has been used to vacuum up fine dust, such as plaster, brick dust, cement or flour, the pores of the FilterBag will become blocked very quickly.

This affects the air permeability of the bag, and the marker will indicate that the bag is “full” even when it is not. If this happens you must still change the FilterBag because suction power will be greatly reduced by blocked pores in the FilterBag.

If, on the other hand, a large amount of hair and carpet lint which typically contains a lot of air is vacuumed up, the indicator may fail to react even though the bag is full. You should still change it. Both these extremes can occur.

Replacing the FilterBag

(Figs. 24, 25 + 26)

- Raise the vacuum cleaner into the vertical position.
- Lift the release button for the dust compartment lid and raise the lid until it clicks into its resting position.
- Pull the tab on the collar and swing the bag up away from the suction socket before taking it out of its holder.

The FilterBag has a closing flap which closes automatically when the dust compartment lid is raised to prevent any dust from escaping.

- Insert the new FilterBag into the holder as far as it will go. Leave the bag folded up when you take it out of the box.
- It should then be unfolded as far as possible in the dust compartment.
- Close the dust compartment lid securely, making sure it clicks into position. Take care not to pinch the FilterBag in the lid when doing so. The FilterBag is then automatically guided into position for vacuuming.

NOTE An empty operation lock prevents the dust compartment lid from closing without a FilterBag in place. Do not attempt to force the lid shut!

When to change the motor protection filter

Replace this filter every time you start a new packet of filter bags.

Every packet of original Miele filter bags contains a motor protection filter. Multipacks contain four motor protection filters.

Changing the dust compartment filter

(Fig. 27)

- Open the dust compartment lid.
- Remove the FilterBag.
- Lift up the filter frame until it clicks and remove the old filter. Hold the filter by the clean, unsoiled section to remove it.

- Replace with a new dust compartment filter.
- Close the filter frame.
- Insert the FilterBag into the holder as far as it will go.
- Close the dust compartment lid securely, making sure it clicks into position. Take care not to pinch the FilterBag when doing so.

When to replace the exhaust filter

Depending on the model, your vacuum cleaner will come standard with one of the following exhaust filters (Fig. 02):

a) AirClean

Replace this filter every time you start a new packet of Miele FilterBags. An AirClean exhaust filter is supplied with every packet of Miele FilterBags.

b) Active AirClean 30 (black)

c) HEPA AirClean 30 (white)

Replace this filter when the exhaust filter change indicator is completely red (Fig. 07).

This occurs after approx. 50 hours of operation, which is equivalent to about a year of average use. The vacuum cleaner can still be used. However, the power will be reduced as will the effectiveness of the filter if it is not replaced in due time.

Replacing the AirClean exhaust filter

(Figs. 28, 29 + 30)

Do not use more than one exhaust filter at a time.

- Open the exhaust filter compartment lid.
- Remove the filter frame.
- Open the filter frame and remove the used AirClean filter by one of the clean, unsoiled sections.
- Replace it with a new AirClean exhaust filter.

NOTE If you wish to install an Active AirClean 30 or HEPA AirClean 30 exhaust filter, see “Replacing one type of exhaust filter with another.”

- Secure the catch on the filter frame and reinsert the frame in the exhaust filter compartment.
- Close the exhaust filter compartment lid.

Replacing the Active AirClean 30 and HEPA AirClean 30 exhaust filters

Do not use more than one exhaust filter at a time.

- Open the exhaust filter compartment lid.
- Remove the exhaust filter (Fig. 31).
- Insert the new exhaust filter and press the exhaust filter change indicator (Fig. 05).

After approx. 10 - 15 seconds, a thin red stripe will appear on the left-hand side of the display (Fig. 06).

NOTE If you wish to install an AirClean exhaust filter, see “Replacing one type of exhaust filter with another”.

- Close the exhaust filter compartment lid.

Replacing one type of exhaust filter with another

(Fig. 02)

Depending on the model, your vacuum cleaner will be fitted as standard with one of the following exhaust filters :

- a. AirClean
- b. Active AirClean 30 (black)
- c. HEPA AirClean 30 (white)

Do not use more than one exhaust filter at a time.

When changing the filter type, please note:

1. If you wish to replace exhaust filter a with filter b or c, you must completely remove the filter frame before you install the new exhaust filter.

In addition, you must also activate the exhaust filter change indicator (Fig. 05).

2. If you wish to replace exhaust filter b or c with filter a, you must insert the new filter into a filter frame * before installing (Fig. 29).

* Filter frame - see “Optional accessories.”

Service indicator with Reset button

(Fig. 32) on models with + / - buttons)

The indicator lights up after approx. 50 hours of operation, which is equivalent to about a year of average use.

At this point, the level of soiling of the dust compartment filter and the exhaust filter must be checked.

The indicator will need to be reset each time these items are replaced. The vacuum cleaner must be switched off to do this.

- Press the Reset button.

The service indicator will go out and reset to zero.

NOTE The indicator can only be reset by pressing the Reset button after the light has come on. Pressing the button at any other time will have no effect.

Removing threads and hair from the Powerbrush

- Switch the Powerbrush and vacuum cleaner off. Unplug the power cord from the electrical outlet.
- Release the vacuum cleaner (Fig. 11) and lay it flat on the floor.
- Turn the vacuum cleaner over.
- Use scissors to cut any threads or hairs which have become wound around the roller brush. There is a groove on the roller to guide you (Fig.33)

Then, run the vacuum cleaner to vacuum up the cut pieces.

The bottom of the suction hose can be accessed to remove heavy dirt or blockages. Any large particles inside the hose can then be easily removed.

- Raise the vacuum cleaner into the vertical position.
- Press the release button on the telescopic wand to detach the suction hose handle (Fig. 17).
- For increased stability, turn the elbow joint at the bottom of the hose downwards as illustrated until it clicks into position above the retainer (Fig. 18).

1. Unlock the hose connector by turning it in the direction of the arrow (Fig. 34).

2. Now detach the hose connector from the elbow by pulling it (Fig. 34).

- Remove any debris or blockages.
- Replace the connector, making sure it goes on straight. Lock it into position.

If you are unable to reach all of the debris, you can also try the following steps:

Unlock the service cover at the back of the vacuum cleaner as follows (Fig. 35).

1. Using a coin, turn the two screws as far as they will go.

2. Pry the cover off.

- Remove any debris or blockages.
- Reinsert the service cover and lock it using the screws.

CLEANING AND CARE

Always disconnect the vacuum cleaner from the electrical supply before cleaning it. Turn off and unplug it.

Vacuum cleaner and accessories

The vacuum cleaner and all plastic accessories can be cleaned with a proprietary cleaner suitable for plastic.

Do not use abrasive cleaning agents, glass cleaning agents, allpurpose cleaners or oil-based conditioning agents!

Dust compartment

The dust compartment can, if necessary, be cleaned using a dry duster, brush or, if available, a second vacuum cleaner to vacuum the dust out.

Monitor the filter bag change indicator and inspect all filters regularly. Clean or replace them when necessary according to these Operating Instructions.

Do not let the vacuum cleaner get wet. If moisture gets into the appliance, there is a risk of electric shock.

FAQ

Problem	Possible cause and solution
<p>The vacuum cleaner turns off automatically.</p>	<p>The overheat protection has been activated, e.g., due to overheating or a blockage.</p> <p>Models with a rotary selector dial: The vacuum in-operation indicator lights up red.</p> <p>Models with + / - buttons: The overheat indicator lights up red.</p> <ul style="list-style-type: none"> • Switch the Powerbrush and vacuum cleaner off. • Unplug the power cord from the electrical outlet. <p>Check the vacuum cleaner for any blockages and check all the filters.</p> <p>After removing the blockage, wait about 20 - 30 minutes before using the vacuum cleaner to allow it to cool down.</p>
<p>The Powerbrush switches off automatically. The Powerbrush indicator lights up red.</p>	<p>The red light indicates a roller blockage, e.g., as a result of a large item being vacuumed up.</p> <ul style="list-style-type: none"> • Switch the Powerbrush and vacuum cleaner off. <p>Unplug the power cord from the electrical outlet.</p> <ul style="list-style-type: none"> • Remove the blockage. <p>The vacuum cleaner can then be used again.</p>
<p>The Powerbrush switches off automatically. The Powerbrush indicator stays yellow</p>	<p>The overheat protection has been activated, e.g., due to overheating or a blockage.</p> <ul style="list-style-type: none"> • Switch the Powerbrush and vacuum cleaner off. <p>Unplug the power cord from the electrical outlet.</p> <ul style="list-style-type: none"> • Check the vacuum cleaner for any blockages and check all the filters.

The Powerbrush needs to cool down. To speed up this process:

- Plug the vacuum cleaner in again and turn it on.
- Vacuum for approx. 10 minutes without switching the Powerbrush on.

This allows the Powerbrush to cool down so that it can then be used again.
